

Annual Overview :
**Patients in Publicly Funded
Substance Use Disorder Treatment
Programs in Los Angeles County**
2021-2022 Fiscal Year

Health Outcomes and Data Analytics

May 2023

Table of Contents

List of Tables	iv
List of Figures	ix
Data Source and Notes	xii
Executive Summary.....	xiv
CHAPTER 1: Who We Serve	1
CHAPTER 2: Patient Characteristics by Primary Substance of Use	7
Patients with Heroin as Primary Substance of Use.....	8
Patients with Methamphetamine as Primary Substance of Use	12
Patients with Marijuana as Primary Substance of Use	16
Patients with Alcohol as Primary Substance of Use	20
Patients with Prescription Drug as Primary Substance of Use	24
Patients with Cocaine as Primary Substance of Use.....	28
CHAPTER 3: Patient Characteristics by Level of Care	35
Patients in Withdrawal Management.....	36
Patients in Residential Service Programs.....	39
Patients in Intensive Outpatient Programs (IOP).....	42
Patients in Outpatient Programs	45
Patients in Opioid Treatment Programs (OTP)	48
CHAPTER 4: Patient Characteristics by Service Planning Area	54
Patients from Service Planning Area 1 (SPA 1)	55
Patients from Service Planning Area 2 (SPA 2)	59
Patients from Service Planning Area 3 (SPA 3)	63
Patients from Service Planning Area 4 (SPA 4)	67
Patients from Service Planning Area 5 (SPA 5)	71
Patients from Service Planning Area 6 (SPA 6)	75
Patients from Service Planning Area 7 (SPA 7)	79
Patients from Service Planning Area 8 (SPA 8)	83
CHAPTER 5: Patient Characteristics by Supervisorial District	90
Patients from Supervisorial District 1 (SD 1).....	91
Patients from Supervisorial District 2 (SD 2).....	95
Patients from Supervisorial District 3 (SD 3).....	99

Patients from Supervisorial District 4 (SD 4).....	103
Patients from Supervisorial District 5 (SD 5).....	107
CHAPTER 6: Patient Characteristics by Special Population	114
Youth.....	115
Transitional Age Youth (TAY)	120
Older Adults	125
Patients Involved in the Criminal Justice System.....	130
Patients who were Experiencing Homelessness at Admission	135
Patients with Disabilities.....	141
Lesbian, Gay, Bisexual, Transgender, and Questioning (LGBTQ) Patients.....	147
Women of Reproductive Age.....	152
Veterans.....	156
Patients Enrolled in My Health LA (MHLA) Program	161

List of Tables

CHAPTER 1: Who We Serve 1

Table 1.1. Number of admissions and discharges, FY2122 2

Table 1.2. Patients by Supervisorial District (SD), FY2122 2

Table 1.3. Patients by Service Planning Area (SPA), FY2122 3

Table 1.4. Discharge status of patients, FY2122 3

Table 1.5. Characteristics of all patients, FY2122 4

Table 1.6. Primary substance use at admission, FY2122 5

Table 1.7. Level of care at admission, FY2122 5

CHAPTER 2: Patient Characteristics by Primary Substance of Use 7

Table 2.1.1. Treatment admissions and discharges among primary heroin patients, FY2122 8

Table 2.1.2. Discharge status of primary heroin patients, FY2122 8

Table 2.1.3. Characteristics of primary heroin patients, FY2122 9

Table 2.1.4. Substance use status among primary heroin patients, FY2122 10

Table 2.1.5. Level of care among primary heroin patients, FY2122 11

Table 2.2.1. Treatment admissions and discharges among primary methamphetamine patients, FY2122 12

Table 2.2.2. Discharge status of primary methamphetamine patients, FY2122 12

Table 2.2.3. Characteristics of primary methamphetamine patients, FY2122 13

Table 2.2.4. Substance use status among primary methamphetamine patients, FY2122 14

Table 2.2.5. Level of care among primary methamphetamine patients, FY2122 15

Table 2.3.1. Treatment admissions and discharges among primary marijuana patients, FY2122 16

Table 2.3.2. Discharge status of primary marijuana patients, FY2122 16

Table 2.3.3. Characteristics of primary marijuana patients, FY2122 17

Table 2.3.4. Substance use status among primary marijuana patients, FY2122 18

Table 2.3.5. Level of care among primary marijuana patients, FY2122 19

Table 2.4.1. Treatment admissions and discharges among primary alcohol patients, FY2122 20

Table 2.4.2. Discharge status of primary alcohol patients, FY2122 20

Table 2.4.3. Characteristics of primary alcohol patients, FY2122 21

Table 2.4.4. Substance use status among primary alcohol patients, FY2122 22

Table 2.4.5. Level of care among primary alcohol patients, FY2122 23

Table 2.5.1. Treatment admissions and discharges among primary Rx misuse patients, FY2122 24

Table 2.5.2. Discharge status of primary Rx misuse patients, FY2122 24

Table 2.5.3. Characteristics of primary Rx misuse patients, FY2122 25

Table 2.5.4. Substance use status among primary Rx misuse patients, FY2122 26

Table 2.5.5. Level of care among primary Rx misuse patients, FY2122 27

Table 2.6.1. Treatment admissions and discharges among primary cocaine patients, FY2122 28

Table 2.6.2. Discharge status of primary cocaine patients, FY2122 28

Table 2.6.3. Characteristics of primary cocaine patients, FY2122 29

Table 2.6.4. Substance use status among primary cocaine patients, FY2122 30

Table 2.6.5. Level of care among primary cocaine patients, FY2122 31

Summary Table 1. Summary statistics of patients with different primary substance of use, FY2122 32

CHAPTER 3: Patient Characteristics by Level of Care 35

Table 3.1.1. Treatment admissions and discharges in withdrawal management, FY2122..... 36

Table 3.1.2. Discharge status of patients in withdrawal management, FY2122..... 36

Table 3.1.3. Characteristics of patients in withdrawal management, FY2122 37

Table 3.1.4. Primary substance use among patients in withdrawal management, FY2122 38

Data Source and Notes

DATA SOURCE

The information presented in this report is based primarily on the California Outcomes Measurement System (CalOMS) /Los Angeles County Participant Reporting System (LACPRS) Data collected by the SAGE system managed by the Los Angeles County Department of Public Health, Substance Abuse Prevention and Control (DPH-SAPC), and data obtained from secondary SAGE users that were missing from the primary Sage data source. CalOMS is a database in Sage, DPH-SAPC's substance use disorder (SUD) information system that secures ongoing annual cross-sectional data obtained at admission and discharge on patients from all publicly funded SUD treatment programs in LAC. CalOMS contains data on federal and state-required standardized measures, as well as additional sociodemographic and life and health outcome measures specific to LAC. Data analyzed for this report were retrieved on 03/16/2023.

MEASURES AND DESCRIPTIONS

Patient: A patient is a unique individual who was formally admitted and received SUD treatment or recovery services in a publicly funded speciality SUD treatment program in LAC. Patients in this report include those unique individuals who were admitted/received services in FY2122, and those who were admitted/received services prior to FY2122 and continued receiving services in FY2122. Statistics of gender identity, race/ethnicity, age, sexual orientation, and education are based on the unique number of patients.

Admission: An admission is the formal acceptance of a patient into a speciality SUD treatment program after completing the screening and intake process. Each admission has defined dates of admission and discharge. A patient may have multiple admissions depending on their treatment needs in a fiscal year. For example, an individual admitted to treatment twice within a fiscal year would be counted as two admissions. Admissions in this report include all new admissions during FY2122, and admissions prior to FY2122 and continued in FY2122. Statistics of some of the patients' characteristics (e.g., mental health issues, physical health issues, criminal justice status), primary substance use, level of care, discharge status, and treatment effectiveness assessment are based on the number of admissions.

Discharge status is defined as follows:

Positive compliance – patients either completed treatment/recovery plan/goals or left treatment without completing treatment plan/goals with satisfactory progress.

Negative compliance – patients left without completing treatment plan/goals with unsatisfactory progress.

Other – patients were discharged for other reasons (e.g., death, incarceration, or some other unknown reasons).

Primary substance use at admission: Patients were asked to select the primary substance they used out of 20 available alcohol and drug choices. Their responses were categorized into the following: heroin, methamphetamine, alcohol, marijuana, cocaine, prescription drugs (e.g., OxyContin, stimulants,

tranquilizers/ benzodiazepine), and other drugs (e.g., PCP, hallucinogens, inhalants, ecstasy, other club drugs).

Mental health issues: Patients who have ever been diagnosed with a mental illness or have received outpatient emergency services for mental health needs, have stayed for more than 24 hours in a hospital or psychiatric facility for mental health needs, or have taken prescribed medication for mental health needs in the past 30 days at admission.

Physical health issues: Patients who have visited an emergency room, have stayed overnight in a hospital for physical health problems, or have experienced a physical health problem in the past 30 days at admission.

Criminal justice involvement: Patients involved in the criminal justice system, including those who were referred by the criminal justice system (e.g., Proposition 36/ Probation or Parole, Post-release Community Supervision (AB 109), Adult Felon Drug Court, Dependency Drug Court, etc.), who reported their eligibility of criminal justice system programs (e.g., Drug Court, AB109, Proposition 36, Parolee Service Network, Proposition 47), or who were matched with AB109 or other probation source lists.

DATA LIMITATIONS AND GAPS

- This report includes CalOMS data from the SAGE system, as well as data obtained from the secondary SAGE users that were missing from the primary SAGE data source. By incorporating data from additional sources, we aim to provide a more comprehensive and accurate perspective in this report. However, it is important to exercise caution and consider the potential impact of data source integration on noticeable changes or trends observed, particularly for the fiscal year 2021-2022.
- The majority of the information collected via CalOMS is self-reported by patients. Therefore, results should be interpreted with caution.
- The self-reported primary substance use may differ from the DSM-V diagnosis of alcohol or other drug use disorder.
- The overall number of admissions and discharges may be over or underreported due to some open admissions that were not closed on time by treatment or recovery programs.
- This report does not include any data from private treatment or recovery programs in LAC. All information pertains only to patients and admissions in publicly funded SUD treatment programs.
- When the number of patients is five or less in any rows/columns in a table, they are not reported to protect confidentiality.

Executive Summary

This annual report is a comprehensive description of patients who received substance use disorder (SUD) treatment in publicly funded treatment programs in Los Angeles County (LAC) during the fiscal year 2021-2022 (FY2122). This report provides information on the sociodemographic and treatment characteristics of patients aged 12 and older, including but not limited to the number of admissions and discharges, discharge status, substance use status, levels of care, geographic distribution, and characteristics for special populations. In addition, trends over the last 10 fiscal years (FY1213-FY2122) are presented for selected variables. The present report is comprised of six chapters, and the key highlights of each chapter are as follows:

Chapter 1 - Who we serve

- 33,800 patients accounting for 53,443 SUD treatment admissions were served in FY2122; 64.1% of patients were males, 53.8% were Latinx, 70.1% were aged 26-54, and 66.6% were unemployed.
- 9.8% primarily spoke a language other than English at home.
- 51.0% reported having mental health issues, 33.9% were homeless, and 24.3% were involved in the criminal justice system.
- 28.6% reported methamphetamine as their primary substance use at admission, followed by alcohol (25.7%), heroin (21.3%), prescription drug (12.7%), marijuana (7.8%), and cocaine (3.2%).
- 28.9% received services in residential programs, followed by outpatient programs (23.0%), opioid treatment programs (21.7%), intensive outpatient programs (12.4%), withdrawal management (10.8%), and recovery support services (3.3%).
- 15.7% were from SPA 2 (San Fernando), followed by SPA 3 (San Gabriel Valley, 13.9%) and SPA 8 (South Bay, 11.2%).
- 37,771 (70.7%) admissions were discharged, of which 53.3% had positive compliance.

Chapter 2 - Primary Substance Use

Patients with Primary Heroin Use:

- 52.0% decrease in admissions from FY1617 to FY2122.
- 71.1% of patients were male.
- 52.5% reported using heroin every day 30 days prior to admission.
- 79.0% had previously received SUD treatment.
- 47.3% were discharged with positive compliance.

Patients with Primary Methamphetamine Use:

- 24.3% increase in admissions from FY1617 to FY2122.
- 35.0% were involved in the criminal justice system.
- 53.1% were homeless at admission.
- 54.6% reported poly-drug use.
- 40.1% initiated methamphetamine use before age 18.
- 49.9% were discharged with positive compliance.

Patients with Primary Marijuana Use:

- 78.4% decrease in admissions from FY1213 to FY2122.
- 23.5% of patients were youth aged 17 and under.
- 8.8% initiated at age 11 or younger; 71.1% initiated marijuana use between ages 12 and 17.
- 56.3% were treated in outpatient programs, followed by residential service programs (20.7%) and intensive outpatient programs (18.0%).
- 43.6% were discharged with positive compliance.

Patients with Primary Alcohol Use:

- 9.2% had their first drink at age 11 or younger, and 59.9% between ages 12 and 17.
- 63.8% reported having mental health issues.
- 30.7% were treated in residential service programs, followed by outpatient programs (28.4%), withdrawal management (22.1%), and intensive outpatient programs (14.8%).
- 64.5% were discharged with positive compliance.

Patients with Primary Prescription Drug Use:

- 63.0% of patients were male, and 46.2% were White.
- 48.5% reported misusing prescription drugs every day 30 days prior to admission.
- 90.6% reported misusing prescription opioids.
- 49.8% were discharged with positive compliance.

Patients with Primary Cocaine Use:

- 67.8% decrease in admissions from FY1213 to FY2122.
- 56.9% of patients were Black/African American.
- 61.1% reported having mental health issues.
- 61.6% reported poly-drug use.
- 47.4% were treated in residential services, followed by outpatient programs (28.7%), intensive outpatient programs (18.7%), and recovery support services (4.1%).
- 53.4% were discharged with positive compliance.

Chapter 3 - Level of Care

Patients Treated in Withdrawal Management:

- 49.3% were homeless.
- 52.0% reported alcohol as their primary substance use, followed by prescription drugs (26.5%) and heroin (17.9%).
- 74.0% were discharged with positive compliance.

Patients Treated in Residential Service Programs:

- 62.7% were homeless at admission, and 3.2% were employed.
- 47.7% reported methamphetamine as their primary substance use, followed by alcohol (27.3%) and heroin (6.8%).
- 56.2% were discharged with positive compliance.

Patients Treated in Intensive Outpatient Programs (IOP):

- 2.2% of patients were aged 17 and under.
- 42.4% reported methamphetamine as their primary substance use, followed by alcohol (30.2%) and marijuana (11.1%).
- 47.2% were discharged with positive compliance.

Patients Treated in Outpatient Programs:

- 35.2% reported methamphetamine as their primary substance use, followed by alcohol (31.7%) and marijuana (19.1%).
- 46.8% were discharged with positive compliance.

Patients Treated in Opioid Treatment Programs (OTP):

- 54.4% of patients were adults ages 45 or older.
- 72.0% reported heroin as their primary substance use, followed by a prescription drug (28.0%)
- 38.6% were discharged with positive compliance.

Chapter 4 - Service Planning Area (SPA)

- Latinx (79.4% for SPA 7) and White (57.4% for SPA 5) accounted for the largest proportion of the race/ethnic groups served in most of the SPAs, but Black was the second largest in SPA 6 (34.1%).
- Heroin was the most common primary substance use at admission for six out of eight SPAs, accounting for 33.2% of admissions in SPA 2 and 30.7% of admissions in SPA 5. Methamphetamine was the most common primary substance use for SPA 6 (30.3%), and prescription drug was the most common for SPA 1 (22.3%).
- Opioid treatment programs and outpatient programs were the most common levels of care across all SPAs except in SPA 5, where opioid treatment programs and residential services were the most common levels of care. Among all SPAs, SPA 5 had the largest proportion of admissions to opioid treatment programs (37.3%), and SPA 6 had the largest proportion of admissions to outpatient programs (34.1%).
- The percent of admissions discharged with positive compliance was highest in SPA 5 (60.4%) and lowest in SPA 6 (45.6%).
- The highlights are summarized in the table (next page):

	Race/Ethnicity		Primary Substance Use		Level of Care		Positive Compliance
SPA 1	Latinx	42.3%	Prescription drug	22.3%	OTP	33.6%	53.2%
	White	33.3%	Heroin	21.8%	Outpatient	31.1%	
SPA 2	White	46.1%	Heroin	33.2%	OTP	32.2%	56.8%
	Latinx	44.5%	Alcohol	26.1%	Outpatient	24.6%	
SPA 3	Latinx	63.8%	Heroin	28.7%	OTP	32.2%	46.7%
	White	26.3%	Methamphetamine	24.1%	Outpatient	27.8%	
SPA 4	Latinx	57.5%	Heroin	25.6%	OTP	28.9%	48.5%
	White	25.2%	Methamphetamine	25.4%	Outpatient	26.8%	
SPA 5	White	57.4%	Heroin	30.7%	OTP	37.3%	60.4%
	Latinx	26.8%	Alcohol	27.9%	Residential	20.4%	
SPA 6	Latinx	52.3%	Methamphetamine	30.3%	Outpatient	34.1%	45.6%
	Black	34.1%	Alcohol	22.7%	OTP	19.8%	
SPA 7	Latinx	79.4%	Heroin	25.9%	OTP	31.2%	49.3%
	White	14.6%	Methamphetamine	25.6%	Outpatient	29.5%	
SPA 8	Latinx	47.7%	Heroin	25.3%	OTP	31.7%	48.2%
	White	27.9%	Alcohol	23.3%	Outpatient	24.2%	
Homeless	Latinx	52.4%	Methamphetamine	39.7%	Residential	49.8%	57.7%
	White	25.7%	Alcohol	29.6%	Outpatient	15.1%	
LAC Overall	Latinx	53.8%	Methamphetamine	28.6%	Residential	28.9%	53.3%
	White	28.0%	Alcohol	25.7%	Outpatient	23.0%	

Chapter 5 – Supervisorial District (SD)

- Latinx (70.3% for SD 1) and White (45.4% for SD 3) accounted for the largest proportion of the race/ethnic groups for all SDs, except for SD 2, where Black was the second largest group (31.1%).
- Methamphetamine was the most common primary substance use in SD 2 (27.2%). Heroin was the most common primary substance use among admissions in all other SDs, accounting for 25.3% (SD 4) to 30.8% (SD 3) of admissions.
- Alcohol was the second most common primary substance use in SD 2, SD 3, and SD 5; methamphetamine was the second most common primary substance use in SD 1 and SD 4.
- The most common level of care was outpatient programs, followed by opioid treatment programs for SD 2; the most common level of care was opioid treatment programs, followed by outpatient programs for SD 1, SD 3, SD 4, and SD 5.
- The percent of admissions discharged with positive compliance was highest in SD 3 (56.9%) and lowest in SD 1 (44.9%).
- The highlights are summarized in the table below:

	Race/Ethnicity		Primary substance use		Level of Care		Positive Compliance
SD 1	Latinx	70.3%	Heroin	29.8%	OTP	33.7%	44.9%
	White	18.6%	Methamphetamine	25.5%	Outpatient	29.3%	
SD 2	Latinx	49.6%	Methamphetamine	27.2%	Outpatient	31.4%	48.0%
	Black	31.1%	Alcohol	23.9%	OTP	22.8%	
SD 3	White	45.4%	Heroin	30.8%	OTP	32.0 %	56.9%
	Latinx	44.2%	Alcohol	26.5%	Outpatient	26.3%	
SD 4	Latinx	63.3%	Heroin	25.3%	OTP	30.9%	48.1%
	White	24.0 %	Methamphetamine	23.4%	Outpatient	25.5%	
SD 5	Latinx	43.3%	Heroin	28.5%	OTP	32.0%	54.5%
	White	42.3%	Alcohol	24.6%	Outpatient	24.0%	
Homeless	Latinx	52.4%	Methamphetamine	39.7%	Residential	49.8%	57.7%
	White	25.7%	Alcohol	29.6%	Outpatient	15.1%	
LAC Overall	Latinx	53.8%	Methamphetamine	28.6%	Residential	28.9%	53.3%
	White	28.0%	Alcohol	25.7%	Outpatient	23.0%	

Chapter 6 - Special Populations

Youth (ages 12–17 years):

- Youth accounted for 2.9% of all LAC patients.
- 84.3% reported marijuana as their primary substance use, followed by prescription drug (6.1%) and alcohol (5.0%).
- 79.0% were treated in outpatient programs, followed by intensive outpatient programs (12.3%) and residential service programs (7.0%).
- 32.1% were discharged with positive compliance.

Transitional Age Youth (ages 16-25 years):

- Transitional age youth accounted for 12.2% of all LAC patients.
- 26.0% were involved with the criminal justice system.
- 27.9% reported methamphetamine as their primary substance use, followed by marijuana (24.6%) and prescription drug (19.9%).
- 34.1% were treated in outpatient programs, followed by residential service programs (30.9%) and intensive outpatient programs (13.9%).
- 45.8% were discharged with positive compliance.

Older Adults (ages 65 and older):

- Older adults accounted for 4.7% of all LAC patients.
- 72.7% of patients were male, 37.4% were White, and 36.1% were Latinx.
- 9.3% were homeless at admission.
- 69.6% reported heroin as their primary substance use, followed by prescription drugs (14.9%) and alcohol (8.7%).
- 81.5% were treated in opioid treatment programs, followed by residential service programs (6.0%) and outpatient programs (4.8%).
- 60.4% were discharged with positive compliance.

Patients Involved in Criminal Justice System:

- Patients involved in the criminal justice system accounted for 24.3% of all LAC patients.
- 75.5% of patients were male.
- 47.6% were homeless at admission.
- 43.3% reported methamphetamine as their primary substance use, followed by alcohol (21.9%) and heroin (14.6%).
- 42.0% were treated in residential service programs, followed by outpatient programs (24.7%) and intensive outpatient programs (15.8%).
- 56.1% were discharged with positive compliance.

Patients Experiencing Homelessness at Admission:

- Patients experiencing homelessness at admission accounted for 33.9% of all LAC patients.
- 64.9% reported having mental health issues.
- 39.7% reported methamphetamine as their primary substance use, followed by alcohol (29.6%) and heroin (11.9%).
- 49.8% were treated in residential service programs, followed by outpatient (15.1%) and withdrawal management programs (14.6%).
- 57.7% were discharged with positive compliance.
- 31.9% of patients who were homeless at admission found stable housing at discharge.

Patients with Disabilities:

- Patients with disabilities accounted for 18.0% of all LAC patients.
- 74.0% reported having mental disabilities, followed by mobility (13.0%), visual (4.6%), hearing (2.0%), developmental (1.7%), and speech (0.8%) disabilities.
- 45.2% were homeless at admission.
- 32.4% reported alcohol as their primary substance use, followed by methamphetamine (26.6%) and heroin (18.3%).
- 33.5% were treated in residential service programs, followed by withdrawal management programs (19.0%) and outpatient programs (19.0%).
- 58.0% were discharged with positive compliance.

LGBTQ Patients:

- LGBTQ patients accounted for 6.3% (2,183) of all LAC patients.
- 91.7% of patients identified as gay, lesbian, or bisexual and 7.7% identified as unsure/questioning.
- 4.9% patients identified as transgender. The majority (70.2%) of them did not report their specific sexual orientation and identified solely as transgender. Additionally, 12.5% identified as heterosexual, and 14.4% identified as lesbian, gay, or bisexual.
- 45.1% were homeless at admission.
- 72.1% reported having mental health issues.
- 45.5% reported methamphetamine as their primary substance use, followed by alcohol (24.6%) and prescription drug (10.1%).
- 39.2% were treated in residential service programs, followed by outpatient programs (23.0%) and intensive outpatient programs (18.2%).
- 54.0% were discharged with positive compliance.

Women of Reproductive Age:

- Women of reproductive age accounted for 27.4% of all LAC patients.
- 56.1% of patients were Latinx, followed by White (24.7%) and Black (16.2%).
- 34.9% were homeless at admission.
- 37.9% reported methamphetamine as their primary substance use, followed by alcohol (25.0%), and prescription drug (12.1%).
- 30.3% were treated in residential service programs, followed by outpatient programs (28.6%) and intensive outpatient programs (15.3%).
- 50.1% were discharged with positive compliance.

Veterans:

- Veterans accounted for 2.1% of all LAC patients.
- 79.5% of patients were male.
- 38.4% were homeless at admission.
- 28.4% reported heroin as their primary substance use, followed by alcohol (26.7%) and methamphetamine (24.0%).
- 32.1% were treated in opioid treatment programs, followed by residential service programs (30.0%) and outpatient programs (17.2%).
- 52.7% were discharged with positive compliance.

Patients Enrolled in My Health LA (MHLA) Program:

- Patients enrolled in MHLA program accounted for 2.1% of all LAC patients.
- 96.4% of patients were Latinx, followed by White (1.5%).
- 53.4% reported methamphetamine as their primary substance use, followed by alcohol (38.6%) and marijuana (4.4%).
- 36.9% were treated in outpatient programs, followed by residential service programs (24.6%) and intensive outpatient programs (20.4%).
- 61.1% were discharged with positive compliance.

Chapter 1

Who We Serve

Chapter 1 describes overall numbers of patients, **admissions** and **discharges**, **trends in admissions** over the past ten years, and the distributions across patient **characteristics**, **primary substance use**, **levels of care**, **geographies**, and **discharge status**.

TREATMENT ADMISSIONS AND DISCHARGES

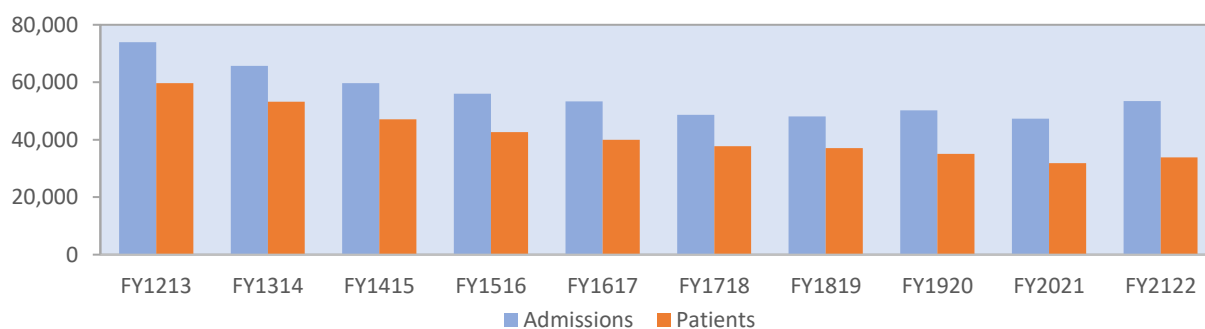

In the fiscal year 2021-2022, a total of 33,800 unique patients, who accounted for 53,443 treatment admissions (Table 1.1), were served at substance use disorder (SUD) treatment programs contracted by DPH-SAPC. 23,759 patients (70.3%) and 37,771 admissions (70.7%) were discharged.

Table 1.1. Number of admissions and discharges, FY2122

	ADMISSIONS	PATIENTS
Admitted	53,443	33,800
Discharged	37,771 (70.7%)	23,759 (70.3%)

The number of patients admitted to the speciality SUD treatment programs has shown a consistent decrease from FY1213 to FY2021, with a slight rebound in FY2122. The number of patients decreased by 37% from 59,713 in FY1213 to 37,770 in FY1718. This decline was primarily attributed to the implementation of the Drug Medi-Cal Organized Delivery System (DMC-ODS) in 2017 and pre-DMC-ODS data issues, such as high open admissions. Subsequently, there was an additional 16% decrease from 37,770 in FY1718 to 31,848 in FY2021, largely due to the impact of the COVID-19 pandemic. However, in FY2122, there was a modest 6% increase with patients served reaching 33,800 (Figure 1.1).

Figure 1.1. Trends in admissions and patients

The proportion of patients residing in the five Supervisorial Districts (SDs) ranged between 12.2% (SD 3) and 17.3% (SD 1) (Table 1.2).

Table 1.2. Patients by Supervisorial District (SD), FY2122

	PATIENTS	% OF TOTAL PATIENTS
SD 1	5,856	17.3
SD 2	5,577	16.5
SD 3	4,128	12.2
SD 4	5,060	15.0
SD 5	5,634	16.7
Homeless	11,464	33.9
Outside LAC	408	1.2
Missing	76	0.2
Total	33,800	100.0

Note: 1. Numbers are based on non-missing values of zip code of home address. Percentages may not sum to 100% due to rounding.
 2. Patients may report different home addresses during the fiscal year for different treatment admission. Thus, the sum of numbers and percentages may be greater than the total.

The proportion of patients residing in the eight Service Planning Areas (SPAs) ranged between 2.3% (SPA 5) and 15.7% (SPA 2) (Table 1.3).

Table 1.3. Patients by Service Planning Area (SPA), FY2122

	PATIENTS	% OF TOTAL PATIENTS
SPA 1	1,752	5.2
SPA 2	5,300	15.7
SPA 3	4,688	13.9
SPA 4	3,297	9.8
SPA 5	780	2.3
SPA 6	3,497	10.3
SPA 7	3,200	9.5
SPA 8	3,785	11.2
Homeless	11,464	33.9
Outside LAC	408	1.2
Missing	76	0.2
Total	33,800	100.0

Note: 1. Numbers are based on non-missing values of zip code of home address. Percentages may not sum to 100% due to rounding.

2. Patients may report different home addresses during the fiscal year for different treatment admissions. Thus, the sum of numbers and percentages may be greater than the total.

There were 37,771 discharges in FY2122. Among those that reported a discharge status, 53.3% were discharged with positive compliance, with 41.1% completing the treatment and 12.3% leaving treatment with satisfactory progress (Table 1.4).

Table 1.4. Discharge status of patients, FY2122

DISCHARGE STATUS	ADMISSIONS	%
Positive compliance	18,219	53.3
Completed treatment	14,019	41.1
Left – satisfactory progress	4,200	12.3
Negative compliance	13,603	39.8
(Left – unsatisfactory progress)		
Other (Death/incarceration/other)	2,329	6.8

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

PATIENT CHARACTERISTICS

Table 1.5 presents the characteristics of all patients. Key findings include:

- The majority of patients receiving SUD treatment services were male (64.1%), Latinx (53.8%), ages 26 to 34 (31.9%), unemployed (66.6%), and primary English speakers at home (90.2%).
- At admission, 51.0% of patients reported having mental health issues, 33.9% were homeless, and 24.3% were involved in the criminal justice system.

Table 1.5. Characteristics of all patients, FY2122

CHARACTERISTICS		PATIENTS	%
GENDER IDENTITY†	Male	21,634	64.1
	Female	11,993	35.5

PRIMARY SUBSTANCE OF USE AT ADMISSION

Methamphetamine was the most common primary substance use reported at admission (28.6%), followed by alcohol, heroin, and prescription drug. The frequency of primary substance use in the past 30 days prior to admission ranged from 10.6% for 10-19 days use to 34.1% for no use (Table 1.6).

Table 1.6. Primary substance use at admission, FY2122

SUBSTANCE USE STATUS		ADMISSIONS	%

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

LEVEL OF CARE

Residential service programs (28.9%) were the most common level of care that patients were admitted to, followed by outpatient (23.0%), opioid treatment (21.7%), and intensive outpatient programs (12.4%). Average length of stay ranges from 6.7 days for withdrawal management residential services to 512.7 days for opioid treatment programs (Table 1.7).

Table 1.7. Level of care at admission, FY2122

MEDI-CAL BENEFICIARIES

This section is only for patients whose claim data were matched with the MEDS (Medi-Cal Eligibility Data system) data. Overall, 94.5% were identified as Medi-Cal beneficiaries with a valid Medi-Cal eligibility status, with the highest rate among those aged 21 and above (95.1%) and the lowest rate among youth (81.9%). The proportion of Medi-Cal beneficiaries was also different across levels of care, with the highest among opioid treatment program (98.6%), followed by intensive outpatient program (96.0%), medically monitored inpatient withdrawal management (94.7%), recovery support service (94.3%), outpatient program (94.0%), residential service (92.9%), and clinically managed residential withdrawal management (92.9%) (Figure 1.2).

Figure 1.2. Percentage of Medi-Cal beneficiaries by level of care (LOC)* and age group, FY2122

Chapter 2

Patient Characteristics by Primary Substance of Use

Chapter 2 provides the number of admissions and discharges, patient characteristics, discharge status, substance use status, and levels of care for the six commonly reported primary substances (**heroin, methamphetamine, marijuana, alcohol, prescription drug, and cocaine**) misused/abused.

Patients with Heroin as Primary Substance of Use

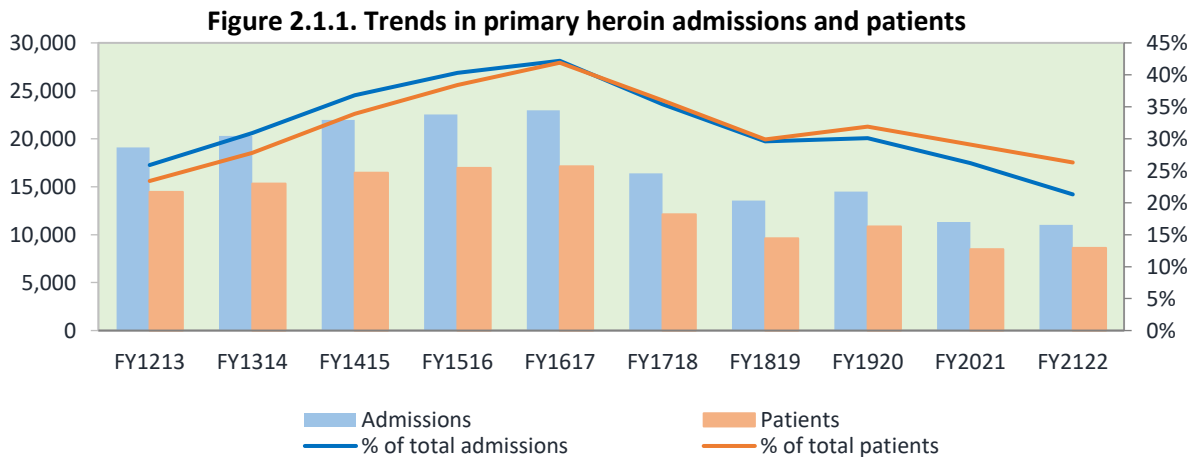

TREATMENT ADMISSIONS AND DISCHARGES

There were 11,022 admissions (8,634 patients) reporting heroin as the primary substance use, accounting for 21.3% of total treatment admissions (Table 2.1.1).

Table 2.1.1. Treatment admissions and discharges among primary heroin patients, FY2122

	ADMISSIONS		PATIENTS	
	N	% of total admissions	N	% of total patients
Admitted	11,022	21.3	8,634	26.3
Discharged	5,457	14.7	3,943	16.9

The number and proportion of primary heroin admissions and patients increased from FY1213 to FY1617 and decreased thereafter. Specifically, the number of primary heroin admissions decreased by 52.0%, from 22,982 in FY1617 to 11,022 in FY2122 (Figure 2.1.1).

Of the discharges, 47.3% had positive compliance, with 28.7% completing the treatment and 18.6% leaving treatment with satisfactory progress (Table 2.1.2).

Table 2.1.2. Discharge status of primary heroin patients, FY2122

DISCHARGE STATUS	ADMISSIONS	%
Positive compliance	2,367	47.3
Completed treatment	1,437	28.7
Left – satisfactory progress	930	18.6
Negative compliance	2,390	47.8
(Left – unsatisfactory progress)		
Other (Death/incarceration/other)	247	4.9

Note: Percentages are based on non-missing values and may not sum to 100% due to rounding.

PATIENT CHARACTERISTICS

The majority of primary heroin patients were male (71.1%), Latinx (46.4%), ages 55-64 (23.4%), and unemployed (63.9%). Among primary heroin admissions, 30.1% reported having mental health issues (Table 2.1.3).

Table 2.1.3. Characteristics of primary heroin patients, FY2122

N ≤ 5 not reported to protect confidentiality.

SUBSTANCE USE STATUS AT ADMISSION

Among primary heroin admissions, 43.1% reported poly-drug use. Over half (52.5%) reported using heroin every day in the 30 days prior to admission. The majority (79.0%) of primary heroin admissions received SUD treatment previously (Table 2.1.4).

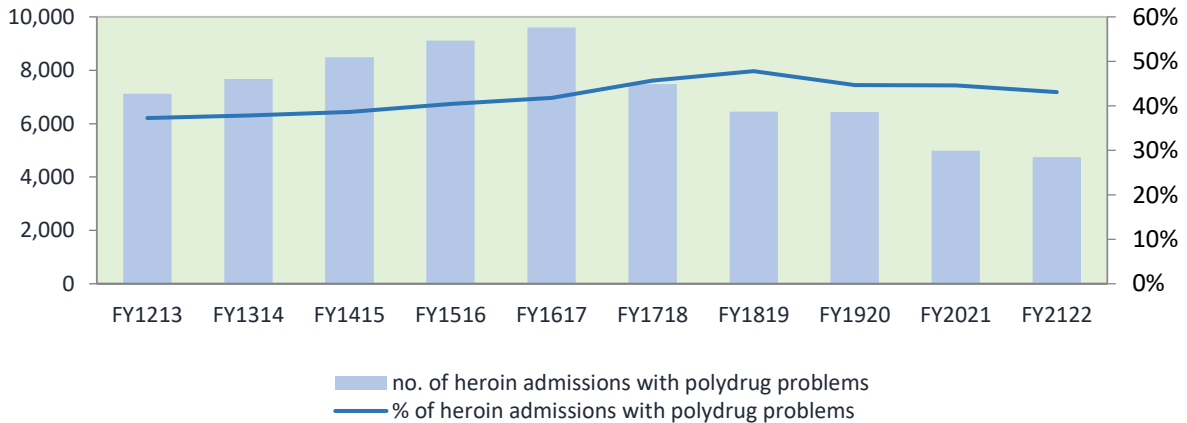

Table 2.1.4. Substance use status among primary heroin patients, FY2122

SUBSTANCE USE STATUS		ADMISSIONS	%
POLY-DRUG	Heroin use only	6,275	56.9
	Heroin with other substance use	4,747	43.1
FREQUENCY OF USE IN PAST MONTH	No use	2,774	25.2
	1-9 days	797	7.2
	10-19 days	727	6.6

	1-2	4,184	41.2
	3-4	1,909	18.8
	5+	1,926	19.0

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

The proportion of admissions with poly-drug use among primary heroin patients continually increased from 37.3% in FY1213 to 47.8% in FY1819, then decreased to 43.1% in FY2122 (Figure 2.1.2).

Figure 2.1.2. Trends in poly-drug use among primary heroin patients

LEVEL OF CARE

As expected, the majority of primary heroin admissions were admitted to opioid treatment programs (72.9%), followed by residential service programs (9.1%) and withdrawal management programs (9.1%) (Table 2.1.5).

Table 2.1.5. Level of care among primary heroin patients, FY2122

LEVEL OF CARE	ADMISSIONS	%
Withdrawal Management	1,004	9.1
ASAM WM 2	25	0.2
ASAM WM 3.2	821	7.5
ASAM WM 3.7/4.0	158	1.4

Recovery Support Service	112	1.0

Note: Percentages are based on non-missing values and may not sum to 100% due to rounding.
N ≤ 5 not reported to protect confidentiality.

Among the primary heroin patients, the proportion of admissions to opioid treatment programs consistently decreased from 85.4% in FY1617 to 68.0% in FY1819 and increased back to 72.9% in FY2122. In comparison, the proportion of admissions to withdrawal management programs increased from 6.5% in FY1617 to 9.1% in FY2122 (Figure 2.1.3).

Figure 2.1.3. Trends in level of care among primary heroin patients

Patients with Methamphetamine as Primary Substance of Use

TREATMENT ADMISSIONS AND DISCHARGES

There were 14,853 admissions (9,467 patients) reporting methamphetamine as the primary substance use, accounting for 28.6% of total treatment admissions (Table 2.2.1).

Table 2.2.1. Treatment admissions and discharges among primary methamphetamine patients, FY2122

	ADMISSIONS		PATIENTS	
	N	% of total admissions	N	% of total patients
Admitted	14,853	28.6	9,467	28.8
Discharged	11,938	32.2	8,006	34.2

The proportion of primary methamphetamine admissions steadily increased from 15.1% in FY1213 to 28.6% in FY2122. There was a 24.3% increase in the number of admissions from 11,945 in FY1617 to 14,853 in FY2122 (Figure 2.2.1).

Figure 2.2.1. Trends in primary methamphetamine admissions and patients

Of the discharges, 49.9% had positive compliance, with 39.1% completing treatment, and 10.9% leaving the program with satisfactory progress (Table 2.2.2).

Table 2.2.2. Discharge status of primary methamphetamine patients, FY2122

DISCHARGE STATUS	ADMISSIONS	%
Positive compliance	5,442	49.9
Completed treatment	4,258	39.1
Left – satisfactory progress	1,184	10.9
Negative compliance	4,492	41.2
(Left – unsatisfactory progress)		
Other (Death/incarceration/other)	969	8.9

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

PATIENT CHARACTERISTICS

The majority of primary methamphetamine patients were male (60.5%), Latinx (65.0%), ages 26-34 (42.8%), and unemployed (69.4%). Among primary methamphetamine admissions, 53.1% were homeless, 57.9% reported having mental health issues, and 35.0% were involved in the criminal justice system (Table 2.2.3).

Table 2.2.3. Characteristics of primary methamphetamine patients, FY2122

	No	9,594	65.0

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

N ≤ 5 not reported to protect confidentiality.

SUBSTANCE USE STATUS AT ADMISSION

Among primary methamphetamine admissions, 54.6% reported poly-drug use, 10.6% of primary methamphetamine admissions used the drug every day in the 30 days prior to admission, and 66.8% had one or more prior treatment admissions (Table 2.2.4).

Table 2.2.4. Substance use status among primary methamphetamine patients, FY2122

SUBSTANCE USE STATUS		ADMISSIONS	%
POLY-DRUG	Methamphetamine use only	6,748	45.4
	Methamphetamine with other substance use	8,105	54.6
FREQUENCY OF USE IN PAST MONTH	No use	7,033	47.4
	1-9 days	2,924	19.7
	10-19 days	1,615	10.9
	20-29 days	1,699	11.4
	Every day	1,569	10.6
PRIOR SUD TREATMENT ADMISSIONS	None	4,423	33.2
	1-2	5,374	40.4
ADMISSIONS	3-4	1,916	14.4
	5+	1,601	12.0

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

The proportion of primary methamphetamine admissions with poly-drug use slightly decreased from 56.3% in FY1213 to 54.6% in FY2122 (Figure 2.2.2).

LEVEL OF CARE

As shown in Table 2.2.5, the most common level of care among primary methamphetamine admissions was residential service programs (48.1%), followed by outpatient programs (28.1%) and intensive outpatient programs (18.5%).

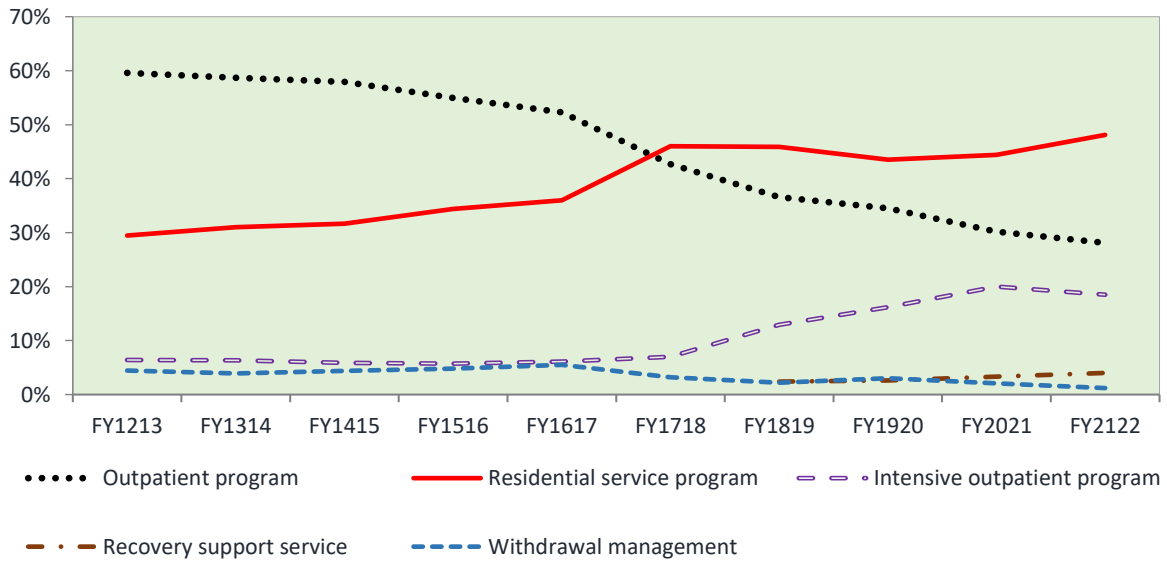

Table 2.2.5. Level of care among primary methamphetamine patients, FY2122

LEVEL OF CARE	ADMISSIONS	%
Withdrawal Management	177	1.2
ASAM WM 1	-	-
ASAM WM 2	-	-
ASAM WM 3.2	156	1.1
ASAM WM 3.7/4.0	19	0.1
Residential Service	7,110	48.1
ASAM 3.1	3,403	23.0
ASAM 3.3	56	0.4
ASAM 3.5	3,651	24.7
Intensive Outpatient (ASAM 2.1)	2,742	18.5
Outpatient (ASAM 1.0)	4,161	28.1
Recovery Support Service	594	4.0

Note: Percentages are based on non-missing values and may not sum to 100% due to rounding.

The proportion of primary methamphetamine admissions to residential service programs increased from 29.5% in FY1213 to 48.1% in FY2122, surpassing the proportion in outpatient beginning FY1718 (Figure 2.2.3).

Figure 2.2.3. Trends in level of care among primary methamphetamine patients

Patients with Marijuana as Primary Substance of Use

TREATMENT ADMISSIONS AND DISCHARGES

There were 4,040 admissions (3,308 patients) reporting marijuana as the primary substance use, accounting for 7.8% of total treatment admissions (Table 2.3.1).

Table 2.3.1. Treatment admissions and discharges among primary marijuana patients, FY2122

	ADMISSIONS		PATIENTS	
	N	% of total admissions	N	% of total patients
Admitted	4,040	7.8	3,308	10.1
Discharged	3,013	8.1	2,538	10.8

The number and proportion of primary marijuana admissions and patients steadily decreased from FY1213 to FY2122. In FY1213, about one out of four admissions reported primary marijuana use; this dropped to less than one in ten admissions in FY2122 (Figure 2.3.1).

Figure 2.3.1. Trends in primary marijuana admissions and patients

Of the discharges, 43.6% had positive compliance, with 32.4% completing treatment and 11.2% leaving with satisfactory progress (Table 2.3.2).

Table 2.3.2. Discharge status of primary marijuana patients, FY2122

DISCHARGE STATUS	ADMISSIONS	%
Positive compliance	1,182	43.6
Completed treatment	879	32.4
Left – satisfactory progress	303	11.2

(Left – unsatisfactory progress)	1,274	47.0
Other (Death/incarceration/other)	253	9.3

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

PATIENT CHARACTERISTICS

The majority of primary marijuana patients were male (59.8%), Latinx (60.0%), ages 26-34 (31.7%), and unemployed (51.5%). About 79.9% of the primary marijuana patients started to use marijuana when they were aged 17 or younger. 27.4% of the admissions were involved in the criminal justice system (Table 2.3.3).

Table 2.3.3. Characteristics of primary marijuana patients, FY2122

	3-4	245	7.1
	5+	125	3.6

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

The proportion of primary marijuana admissions with poly-drug use increased gradually from 44.1% in FY1213 to 57.0% in FY1617, then dropped to 47.1% in FY2122 (Figure 2.3.2).

Figure 2.3.2. Trends in poly-drug use among primary marijuana patients

LEVEL OF CARE

As presented in Table 2.3.5, the most common level of care for primary marijuana admissions was outpatient programs (56.3%), followed by residential service programs (20.7%) and intensive outpatient programs (18.0%).

Table 2.3.5. Level of care among primary marijuana patients, FY2122

LEVEL OF CARE	ADMISSIONS	%
Residential Service	830	20.7
ASAM 3.1	412	10.3
ASAM 3.3	11	0.3
ASAM 3.5	407	10.2
Intensive Outpatient (ASAM 2.1)	720	18.0
Outpatient (ASAM 1.0)	2,257	56.3
Recovery Support Service	199	5.0

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.
N ≤ 5 not reported to protect confidentiality.

The proportions of the outpatient level of care increased from 72.3% in FY1213 to 78.6% in FY1516, which then continually decreased to 56.3% in FY2122. However, the outpatient level still remained the highest for the past ten fiscal years. The proportion of primary marijuana admissions to residential service programs increased overall from 4.9% in FY1213 to 20.7% in FY2122 (Figure 2.3.3).

Figure 2.3.3. Trends in level of care among primary marijuana patients

Patients with Alcohol as Primary Substance of Use

TREATMENT ADMISSIONS AND DISCHARGES

There were 13,310 alcohol admissions (8,004 patients) reporting alcohol as the primary substance use, accounting for 25.7% of all treatment admissions (Table 2.4.1).

Table 2.4.1. Treatment admissions and discharges among primary alcohol patients, FY2122

	ADMISSIONS		PATIENTS	
	N	% of total admissions	N	% of total patients
Admitted	13,310	25.7	8,004	24.3
Discharged	10,824	29.2	6,767	28.9

The number and proportion of primary alcohol admissions and patients increased in the last five fiscal years. Specifically, the proportion of alcohol admissions increased from 13.4% in FY1617 to 25.7% in FY2122 (Figure 2.4.1).

Figure 2.4.1. Trends in primary alcohol admissions and patients

Of the discharges, more than half (64.5%) had positive compliance, with 54.8% completing treatment and 9.7% leaving the program with satisfactory progress (Table 2.4.2).

Table 2.4.2. Discharge status of primary alcohol patients, FY2122

DISCHARGE STATUS	ADMISSIONS	%
Positive compliance	6,363	64.5
Completed treatment	5,410	54.8
Left – satisfactory progress	953	9.7
Negative compliance	2,952	29.9
(Left – unsatisfactory progress)

PATIENT CHARACTERISTICS

The majority of primary alcohol patients were male (64.6%), Latinx (56.7%), ages 26-34 (33.3%), and unemployed (70.8%). Among primary alcohol admissions, 63.8% reported having mental health issues, 41.7% were homeless, and 20.8% reported having a disability (Table 2.4.3).

SUBSTANCE USE STATUS AT ADMISSION

Among primary alcohol admissions, 51.5% reported poly-drug use, 68.4% used alcohol at least one day in the 30 days prior to admission, 31.6% did not use it at all, and 70.7% had one or more prior treatment admission(s) (Table 2.4.4).

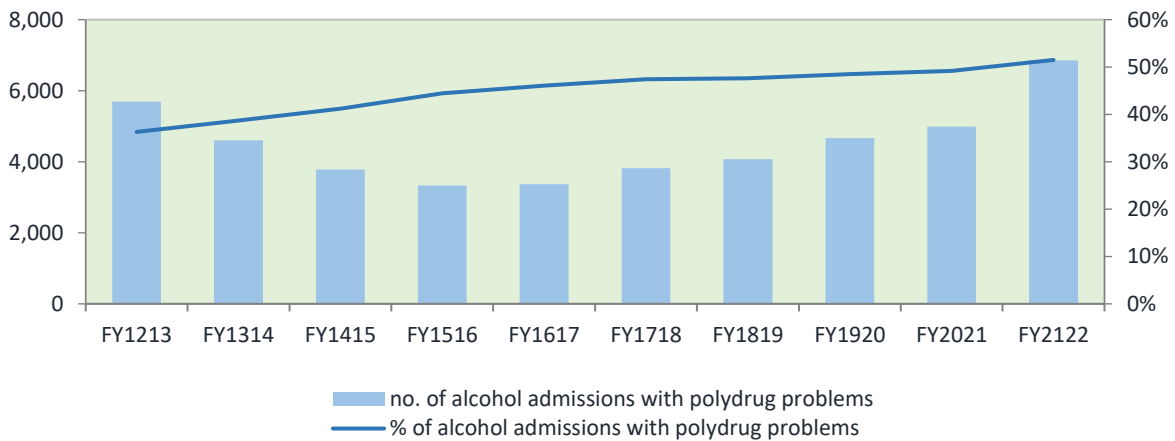

Table 2.4.4. Substance use status among primary alcohol patients, FY2122

SUBSTANCE USE STATUS		ADMISSIONS	%
POLY-DRUG	Alcohol use only	6,455	48.5
	Alcohol with other substance use	6,855	51.5

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

The percentage of primary alcohol admissions with poly-drug use started increasing in FY1213. The proportion increased continuously from 36.3% in FY1213 to 51.5% in FY2122 (Figure 2.4.2).

Figure 2.4.2. Trends in poly-drug use among primary alcohol patients

LEVEL OF CARE

The most common level of care for primary alcohol admissions was residential service programs (30.7%), followed by outpatient programs (28.4%) and withdrawal management programs (22.1%) (Table 2.4.5).

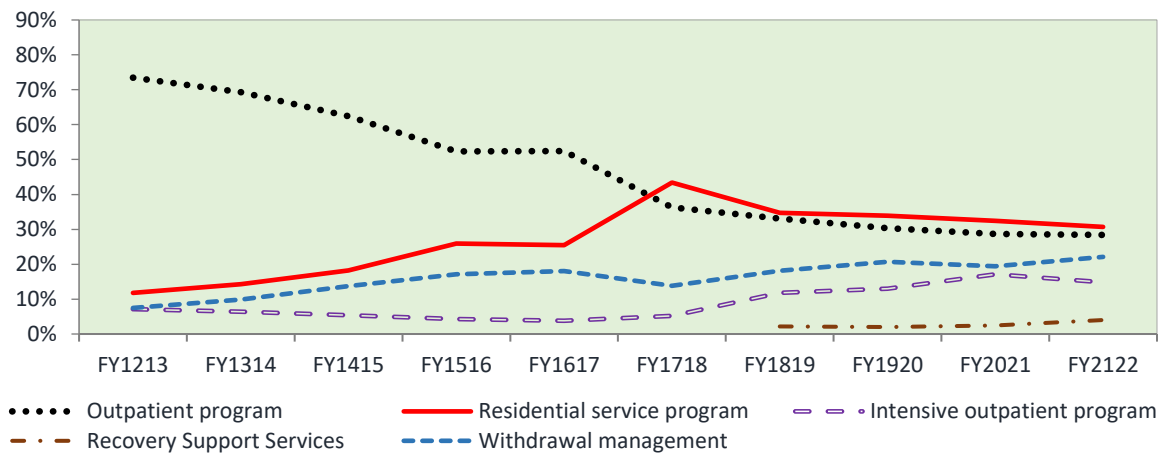

Table 2.4.5. Level of care among primary alcohol patients, FY2122

LEVEL OF CARE	ADMISSIONS	%
Withdrawal Management	2,920	22.1
ASAM WM 1	-	-
ASAM WM 2	37	0.3
ASAM WM 3.2	1,395	10.6

Residential Service	4,060	30.7
ASAM 3.1	1,819	13.8
ASAM 3.3	14	0.1
ASAM 3.5	2,227	16.8
Intensive Outpatient (ASAM 2.1)	1,952	14.8
Outpatient (ASAM 1.0)	3,757	28.4
Recovery Support Service	530	4.0

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

Over the past decade, there has been a noticeable decline in the proportion of primary alcohol admissions to outpatient programs. Conversely, there has been a significant surge in the proportion of primary alcohol admissions to residential service programs, which rose from 11.8% in FY1213 to 43.4% in FY1718, before decreasing to 30.7% in FY2122. In addition, during the period between FY1718 and FY2122, there has been a consistent increase in the proportion of primary alcohol admissions to both intensive outpatient and withdrawal management services (Figure 2.4.3).

Figure 2.4.3. Trends in level of care among primary alcohol patients

Patients with Prescription Drug as Primary Substance of Use

TREATMENT ADMISSIONS AND DISCHARGES

There were 6,561 admissions (4,657 patients) reporting prescription drugs (Rx) as the primary substance use, accounting for 12.7% of total treatment admissions (Table 2.5.1).

Table 2.5.1 Treatment admissions and discharges among primary Rx misuse patients, FY2122

	ADMISSIONS		PATIENTS	
	N	% of total admissions	N	% of total patients
Admitted	6,561	12.7	4,657	14.2
Discharged	4,180	11.3	2,877	12.3

Over the course of the past decade, there has been a notable upward trajectory in both the number and proportion of primary Rx admissions and patients. Specifically, the proportion of primary Rx admissions experienced substantial growth, rising from 4.3% in FY1213 to reach 12.7% in FY2122 (Figure 2.5.1).

Figure 2.5.1. Trends in primary Rx admissions and patients

Of the discharges, about half had positive compliance (49.8%), with 34.5% completing treatment, and 15.4% leaving the treatment program with satisfactory progress (Table 2.5.2).

Table 2.5.2. Discharge status of primary Rx misuse patients, FY2122

DISCHARGE STATUS	ADMISSIONS	%

SUBSTANCE USE STATUS AT ADMISSION

Among the primary Rx admissions, a significant majority (90.6%) reported opioids as their primary substance of use. Furthermore, nearly half (48.5%) of these admissions reported daily usage of prescription drugs in the 30 days leading up to their treatment admission. Additionally, a substantial proportion (58.7%) of these admissions reported engaging in poly-drug use (Table 2.5.4).

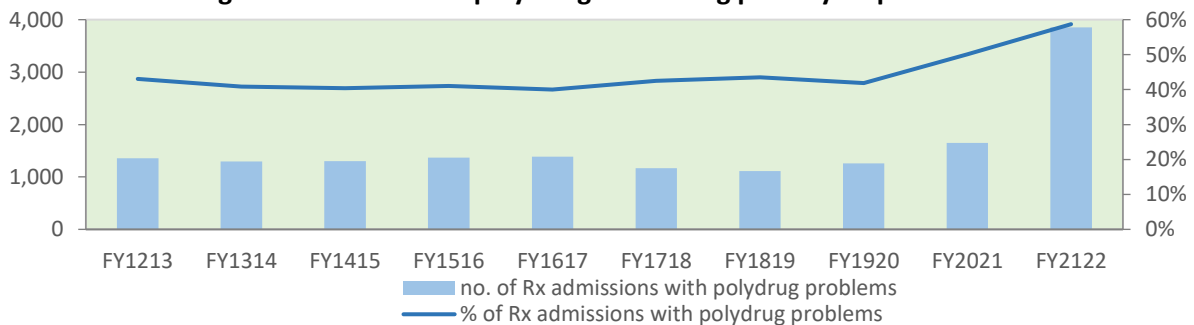

Table 2.5.4. Substance use status among primary Rx misuse patients, FY2122

SUBSTANCE USE STATUS		ADMISSIONS	%

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

The proportion of primary Rx admissions with poly-drug use surged from 41.9% in FY1920 to 58.7% in FY2122 (Figure 2.5.2).

Figure 2.5.2. Trends in poly-drug use among primary Rx patients

LEVEL OF CARE

The most common level of care among primary Rx admissions was opioid treatment programs (47.8%), followed by withdrawal management (22.8%) and residential service programs (14.2%) (Table 2.5.5).

Table 2.5.5. Level of care among primary Rx misuse patients, FY2122

LEVEL OF CARE	ADMISSIONS	%

N ≤ 5 not reported to protect confidentiality.

Over the years, there have been notable fluctuations in the proportions of opioid treatment programs and residential service programs catering to primary Rx admissions. Specifically, the proportion of opioid treatment programs witnessed an upward trend, rising from 57.0% in FY1213 to 72.5% in FY1617, but subsequently experienced a decline, reaching 47.8% in FY2122. On the other hand, the proportion of residential service programs remained relatively stable from FY1213 to FY1617, followed by an increase in FY1718, and then maintaining a steady level through FY2122 (Figure 2.5.3).

Figure 2.5.3. Trends in level of care among primary Rx misuse patients

Patients with Cocaine as Primary Substance of Use

TREATMENT ADMISSIONS AND DISCHARGES

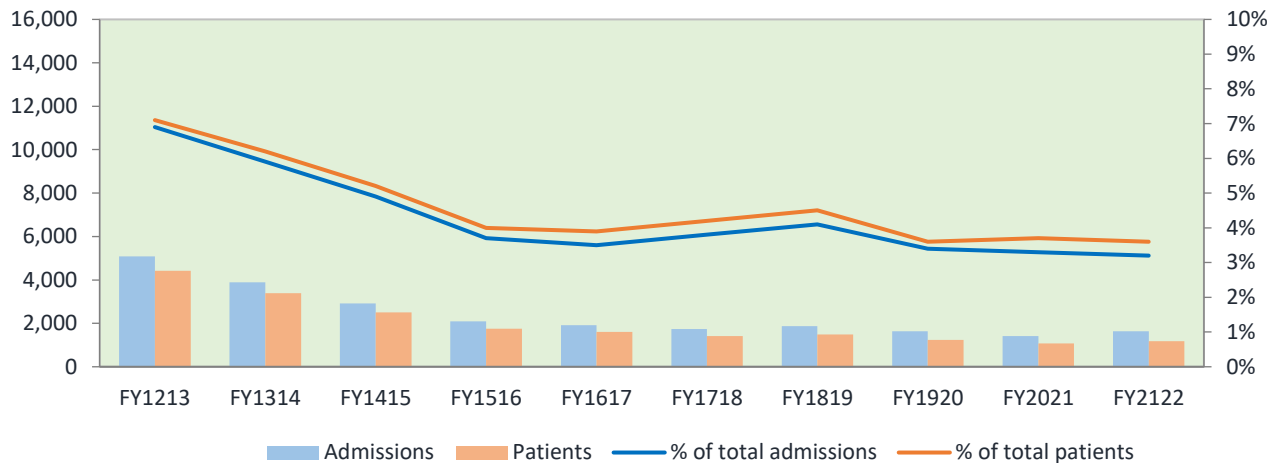

There were 1,638 admissions (1,178 patients) reporting cocaine as the primary substance use, accounting for 3.2% of total treatment admissions (Table 2.6.1).

Table 2.6.1. Treatment admissions and discharges among primary cocaine patients, FY2122

	ADMISSIONS		PATIENTS	
	N	% of total admissions	N	% of patients
Admitted	1,638	3.2	1,178	3.6
Discharged	1,314	3.5	991	4.2

The number and proportion of primary cocaine admissions and patients declined markedly over the past ten fiscal years, with the proportion of admissions decreasing from about 6.9% in FY1213 to 3.2% in FY2122 (Figure 2.6.1).

Figure 2.6.1. Trends in primary cocaine admissions and patients

Of the discharges, over half had positive compliance (53.4%), with 40.8% completing treatment and 12.5% leaving the program with satisfactory progress (Table 2.6.2).

Table 2.6.2. Discharge status of primary cocaine patients, FY2122

DISCHARGE STATUS	ADMISSIONS	%

	3-4	200	13.5
	5+	195	13.1

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

Starting in FY1213, there has been a significant decrease in the number of primary cocaine admissions involving poly-drug use. However, the proportion of admissions remained relatively stable throughout the past ten fiscal years, ranging from 60.5% to 66.3% (Figure 2.6.2).

Figure 2.6.2. Trends in poly-drug use among primary cocaine patients

LEVEL OF CARE

The most common level of care among primary cocaine admissions was residential service programs (47.4%), followed by outpatient programs (28.7%) and intensive outpatient programs (18.7%) (Table 2.6.5).

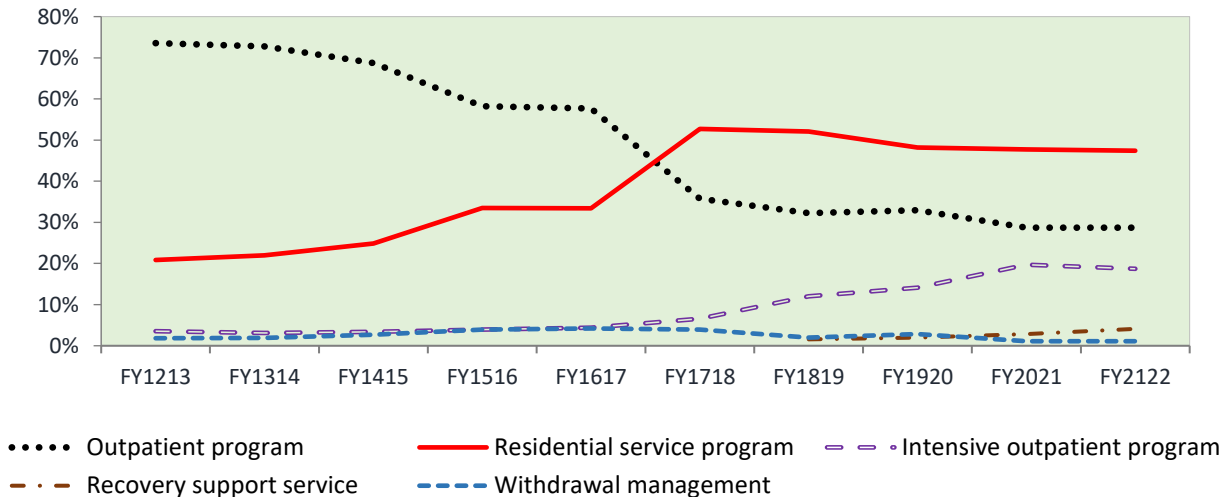

Table 2.6 5. Level of care among primary cocaine patients, FY2122

Recovery Support Service	67	4.1

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.
 N ≤ 5 not reported to protect confidentiality

There has been a noticeable decline in the proportion of primary cocaine admissions to outpatient programs. In contrast, the proportion of primary cocaine admissions to residential service programs showed a significant increase, peaking at 52.7% in FY1718 and remaining relatively stable thereafter. The proportion of primary cocaine admissions to residential service programs has exceeded the proportion of admissions to outpatient programs since FY1718 (Figure 2.6.3).

Figure 2.6.3. Trends in level of care among primary cocaine patients

Chapter 3

Patient Characteristics by Level of Care

Chapter 3 provides descriptive information for admissions by levels of care (**withdrawal management, residential service, outpatient, intensive outpatient, and opioid treatment** program). Numbers of patients, admissions, and discharges are reported, along with trends in admission levels over the past ten years. Patient discharge status, demographic and background characteristics, and primary substance use by levels of care are also described.

Patients in Withdrawal Management

TREATMENT ADMISSIONS AND DISCHARGES

There were 5,700 treatment admissions (4,372 patients) to withdrawal management, accounting for 10.8% of total admissions (Table 3.1.1). The average length of stay for withdrawal management was 6.7 days (Table 1.7).

Table 3.1.1. Treatment admissions and discharges in withdrawal management, FY2122

	ADMISSIONS		PATIENTS	
	N	% of total admissions	N	% of total patients
Admitted	5,700	10.8	4,372	13.0
Discharged	5,228	13.9	4,001	16.9

During the course of the past ten fiscal years, the number and proportion of admissions to withdrawal management remained relatively stable until FY1617, then exhibited an upward trend and increased to 5,700 (10.8%) in FY2122. The overall trend indicates a notable 31.2% increase in admissions from FY1213 to FY2122 (Figure 3.1.1).

Figure 3.1.1. Trends in admissions and patients in withdrawal management

Of the discharges in the withdrawal management programs, 74.0% had positive compliance, with 67.4% completing treatment and 6.6% leaving the program with satisfactory progress (Table 3.1.2).

Table 3.1.2. Discharge status of patients in withdrawal management, FY2122

DISCHARGE STATUS	ADMISSIONS	%
Positive compliance	3,672	74.0
Completed treatment	3,344	67.4
Left – satisfactory progress	328	6.6
Negative compliance	1,227	24.7
(Left – unsatisfactory progress)		
Other (Death/incarceration/other)	63	1.3

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

PATIENT CHARACTERISTICS

The majority of patients in withdrawal management were male (72.7%), Latinx (49.3%), ages 26-34 (35.8%), and unemployed (90.2%). Among admissions in withdrawal management, 71.1% reported having mental health issues, and 49.3% were homeless (Table 3.1.3).

N ≤ 5 not reported to protect confidentiality.

PRIMARY SUBSTANCE USE AT ADMISSION

As shown in Table 3.1.4, alcohol (52.0%) was the most commonly reported primary substance use among patients in withdrawal management, followed by prescription drug (26.5%) and heroin (17.9%).

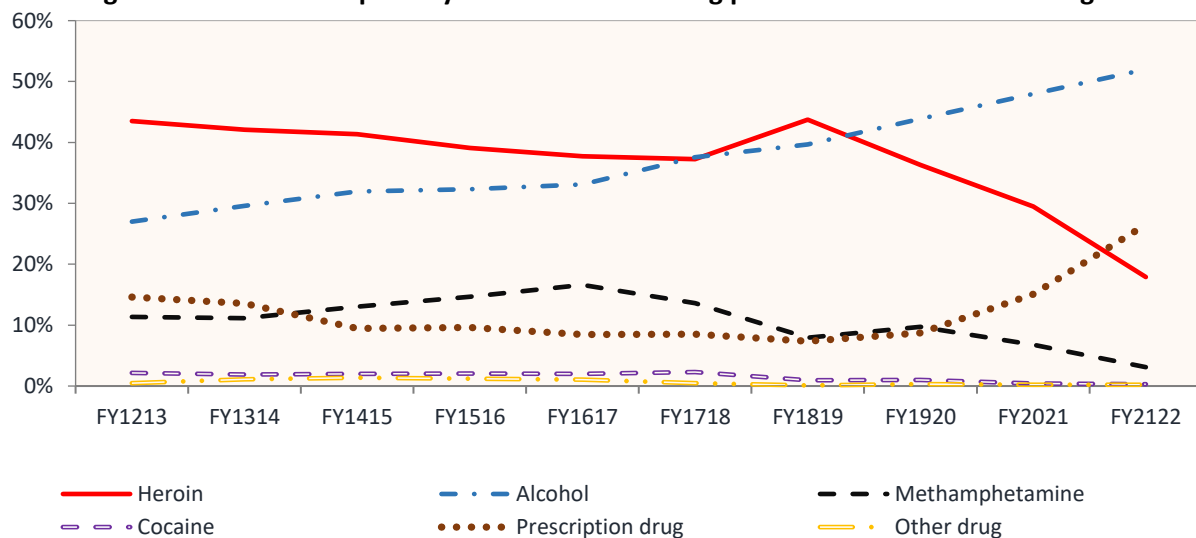

Table 3.1.4. Primary substance use among patients in withdrawal management, FY2122

PRIMARY SUBSTANCE USE	ADMISSIONS	%
Alcohol	2,920	52.0
Prescription drug	1,490	26.5
Heroin	1,004	17.9
Methamphetamine	177	3.1
Cocaine	18	0.3
Other drugs	11	0.2

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

Heroin had been the most common primary substance use among withdrawal management admissions from FY1213 to FY1617 and again in FY1819; however, it underwent a significant decrease thereafter, reaching 17.9% in FY2122. Conversely, the proportion of primary alcohol admissions steadily increased from 27.0% in FY1213 to 52.0% in FY2122. Furthermore, the proportion of primary prescription drug indicated a rapid surge from 8.7% in FY1920 and reached to 26.5% in FY2122 (Figure 3.1.2).

Figure 3.1.2. Trends in primary substance use among patients in withdrawal management

Patients in Residential Service Programs

TREATMENT ADMISSIONS AND DISCHARGES

There was 15,296 treatment admissions (11,600 patients) to residential service programs, accounting for 28.9% of total admissions (Table 3.2.1). The average length of stay for residential service program was 44.2 days (Table 1.7).

Table 3.2.1. Treatment admissions and discharges in residential service programs, FY2122

	ADMISSIONS		PATIENTS	
	N	% of total admissions	N	% of total patients
Admitted	15,296	28.9	11,600	34.4
Discharged	13,045	34.7	9,998	42.2

Following a period of stability, there was a significant increase in both the number and proportion of admissions to residential service programs in FY1718, coinciding with the launch of the Drug Medi-Cal-Organized Delivery System (DMC-ODS). The number of admissions slightly decreased after FY1718 and subsequently rebounded in FY2021 (Figure 3.2.1).

Figure 3.2.1. Trends in admissions and patients in residential service programs

Of the discharges in the residential service programs, more than half (56.2%) had positive compliance, with 45.1% completing treatment and 11.0% leaving the program with satisfactory progress (Table 3.2.2).

Table 3.2.2. Discharge status of patients in residential service programs, FY2122

DISCHARGE STATUS	ADMISSIONS	%
Positive compliance	6,959	56.2
Completed treatment	5,591	45.1
Left – satisfactory progress	1,368	11.0
Negative compliance	4,462	36.0
(Left – unsatisfactory progress)		
Other (Death/incarceration/other)	967	7.8

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

PATIENT CHARACTERISTICS

The majority of patients in residential service programs were male (65.7%), Latinx (53.6%), ages 26-34 (39.2%), and unemployed (76.7%). Among admissions in residential service, 62.7% were homeless, and 64.9% reported having mental health issues (Table 3.2.3).

	No	9,845	66.0

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.
N ≤ 5 not reported to protect confidentiality.

PRIMARY SUBSTANCE USE AT ADMISSION

As shown in Table 3.2.4, methamphetamine was the most commonly reported primary substance use (47.7%) among patients in residential service programs, followed by alcohol (27.3%) and heroin (6.8%).

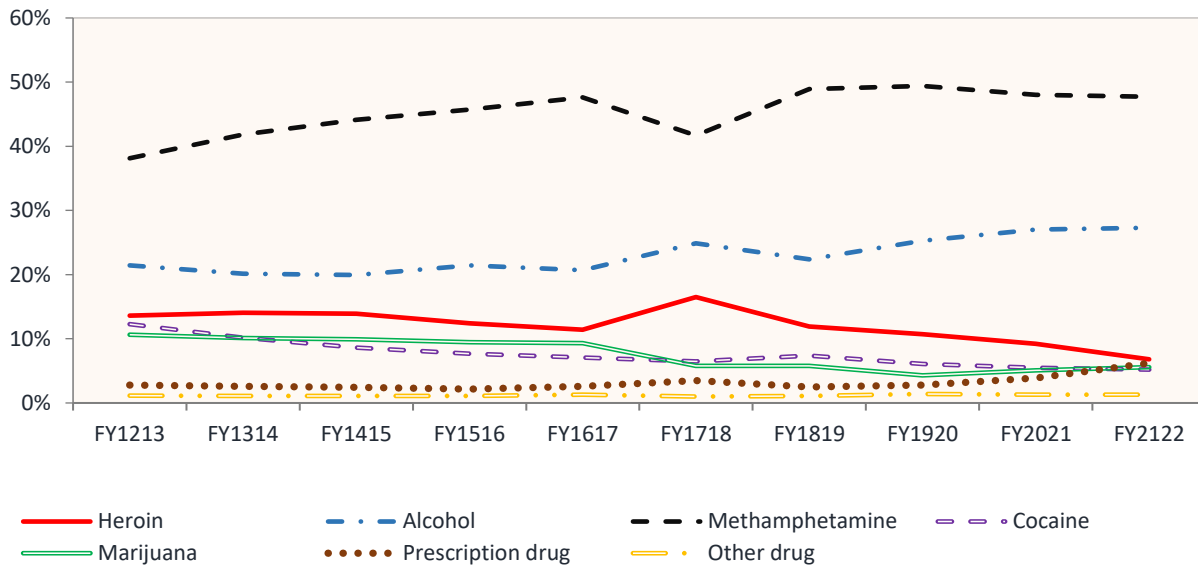

Table 3.2.4. Primary substance use among patients in residential service programs, FY2122

PRIMARY SUBSTANCE USE	ADMISSIONS	%
Methamphetamine	7,110	47.7
Alcohol	4,060	27.3
Heroin	1,006	6.8
Prescription drug	930	6.2
Marijuana	830	5.6
Cocaine	771	5.2
Other drugs	190	1.3

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

Over the course of the past ten fiscal years, methamphetamine and alcohol consistently emerged as the predominant primary substance of use among admissions to residential service programs (Figure 3.2.2).

Figure 3.2.2. Trends in primary substance use among patients in residential service programs

Patients in Intensive Outpatient Programs (IOP)

TREATMENT ADMISSIONS AND DISCHARGES

There were 6,566 treatment admissions (5,919 patients) to intensive outpatient programs, accounting for 12.4% of total admissions (Table 3.3.1). The average length of stay for intensive outpatient program was 83.6 days (Table 1.7).

Table 3.3.1. Treatment admissions and discharges in intensive outpatient programs, FY2122

	ADMISSIONS		PATIENTS	
	N	% of total admissions	N	% of total patients
Admitted	6,566	12.4	5,919	17.6
Discharged	5,156	13.7	4,695	19.8

Coinciding with the launch of the Drug Medi-Cal-Organized Delivery System (DMC-ODS) in FY1718, a substantial upsurge was observed in the number and proportion of admissions and patients enrolled in intensive outpatient programs. Notably, the proportion of admissions (14.2%) and patients (19.2%) admitted to intensive outpatient programs reached its peak in FY2021, followed by a subsequent decline in FY2122 (Figure 3.3.1).

Figure 3.3.1. Trends in admissions and patients in intensive outpatient programs

Of the discharges in the intensive outpatient services programs, 47.2% reported positive compliance, with 36.4% completing treatment and 10.8% leaving the program with satisfactory progress (Table 3.3.2).

Table 3.3.2. Discharge status of patients in intensive outpatient programs, FY2122

DISCHARGE STATUS	ADMISSIONS	%
Positive compliance	2,327	47.2
Completed treatment	1,795	36.4
Left – satisfactory progress	532	10.8
Negative compliance	2,055	41.7
(Left – unsatisfactory progress)		
Other (Death/incarceration/other)	550	11.2

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

PATIENT CHARACTERISTICS

The majority of intensive outpatient program patients were male (59.6%), Latinx (56.7%), ages 26-34 (39.9%), and unemployed (68.9%). More than half of admissions reported having mental health issues (57.7%), and 29.3% were involved in the criminal justice system (Table 3.3.3).

Table 3.3.3. Characteristics of patients in intensive outpatient programs, FY2122

PRIMARY SUBSTANCE USE

As shown in Table 3.3.4, methamphetamine was the most commonly reported primary substance use among patients in intensive outpatient programs (42.4%), followed by alcohol (30.2%) and marijuana (11.1%).

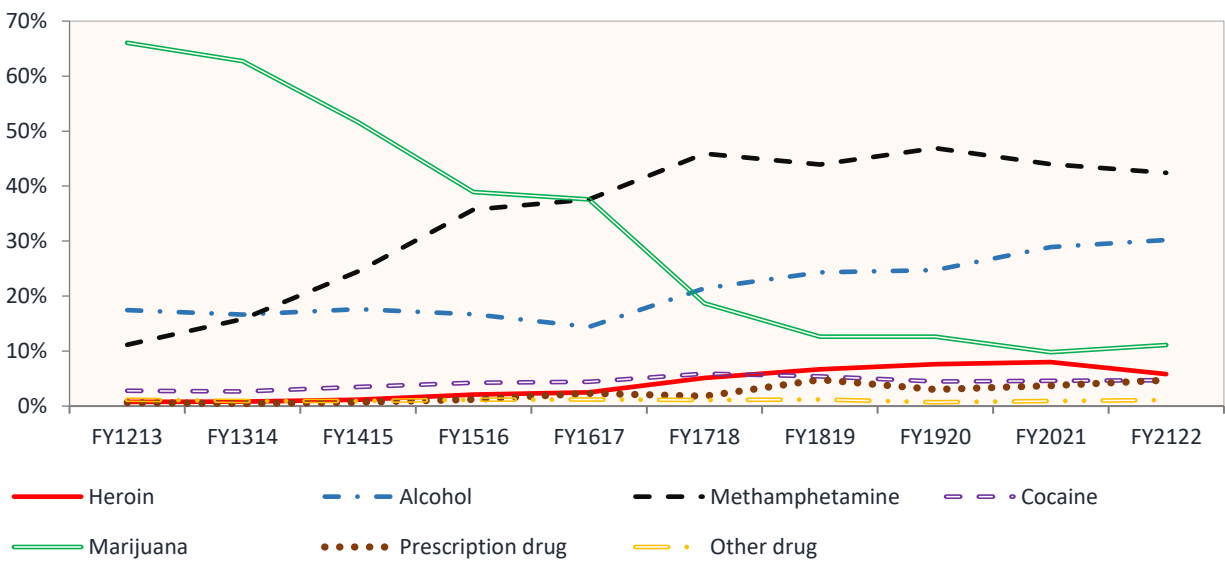

Table 3.3.4. Primary substance use among patients in intensive outpatient programs, FY2122

PRIMARY SUBSTANCE USE	ADMISSIONS	%
Methamphetamine	2,742	42.4
Alcohol	1,952	30.2
Marijuana	720	11.1
Heroin	372	5.8
Cocaine	304	4.7
Prescription drug	304	4.7
Other drugs	70	1.1

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

Over time, there has been a consistent decline in the proportion of primary marijuana admissions to the intensive outpatient program, coinciding with an upward trend in primary methamphetamine admissions. In FY1718, methamphetamine surpassed other substances and emerged as the most prevalent primary drug admission (Figure 3.3.2).

Figure 3.3.2. Trends in primary substance use among patients in intensive outpatient programs

Patients in Outpatient Programs

TREATMENT ADMISSIONS AND DISCHARGES

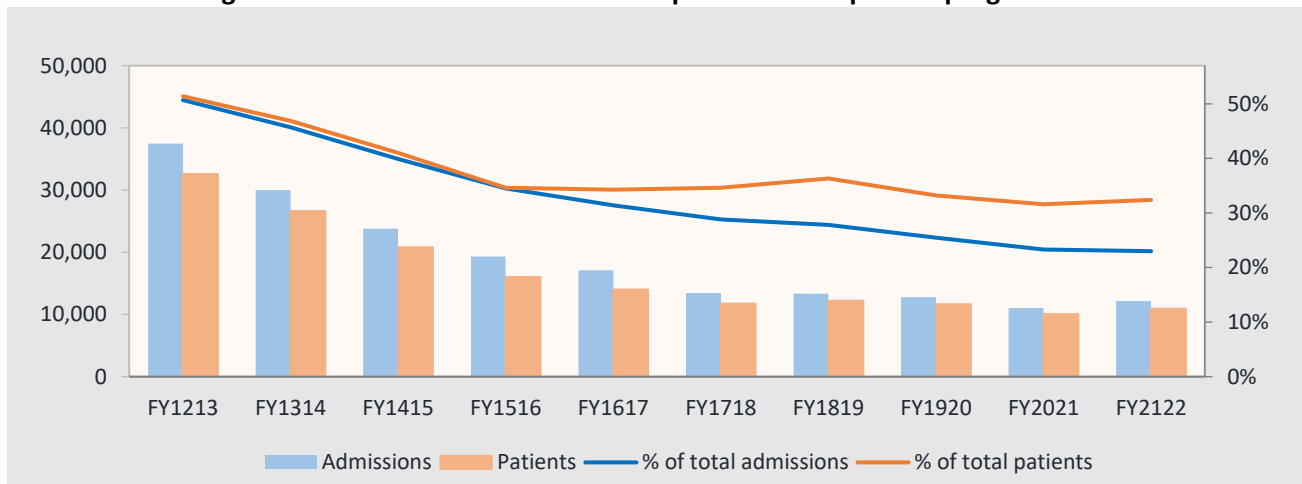

There were 12,150 treatment admissions (10,904 patients) to outpatient programs, accounting for 23.0% of total admissions (Table 3.4.1). The average length of stay for outpatient program was 122.3 days (Table 1.7).

Table 3.4.1. Treatment admissions and discharges in outpatient programs, FY2122

	ADMISSIONS		PATIENTS	
	N	% of total admissions	N	% of total patients
Admitted	12,150	23.0	10,904	32.4
Discharged	8,840	23.5	8,090	34.2

The number and proportion of admissions to outpatient programs revealed a decreasing trend over the past ten fiscal years. Between FY1213 and FY2122, the number of admissions decreased by 67.6% from 37,450 to 12,150, and the proportion dropped from 50.7% to 23.0% (Figure 3.4.1).

Figure 3.4.1. Trends in admissions and patients in outpatient programs

Of the discharges in the outpatient services programs, 46.8% reported positive compliance, with 34.6% completing treatment and 12.2% leaving the program with satisfactory progress (Table 3.4.2).

Table 3.4.2. Discharge status of patients in outpatient programs, FY2122

DISCHARGE STATUS	ADMISSIONS	%
Positive compliance	3,699	46.8
Completed treatment	2,732	34.6
Left – satisfactory progress	967	12.2
Negative compliance	3,553	45.0
(Left – unsatisfactory progress)		
Other (Death/incarceration/other)	651	8.2

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

PATIENT CHARACTERISTICS

The majority of patients in outpatient programs were male (60.3%), Latinx (62.7%), ages 26-34 (35.8%), and unemployed (54.2%). 49.6% of admissions reported having mental health issues, and 25.0% were involved in the criminal justice system (Table 3.4.3).

PRIMARY SUBSTANCE USE AT ADMISSION

As shown in Table 3.4.4, methamphetamine was the most commonly reported primary substance use (35.2%) in outpatient programs, followed by alcohol (31.7%) and marijuana (19.1%).

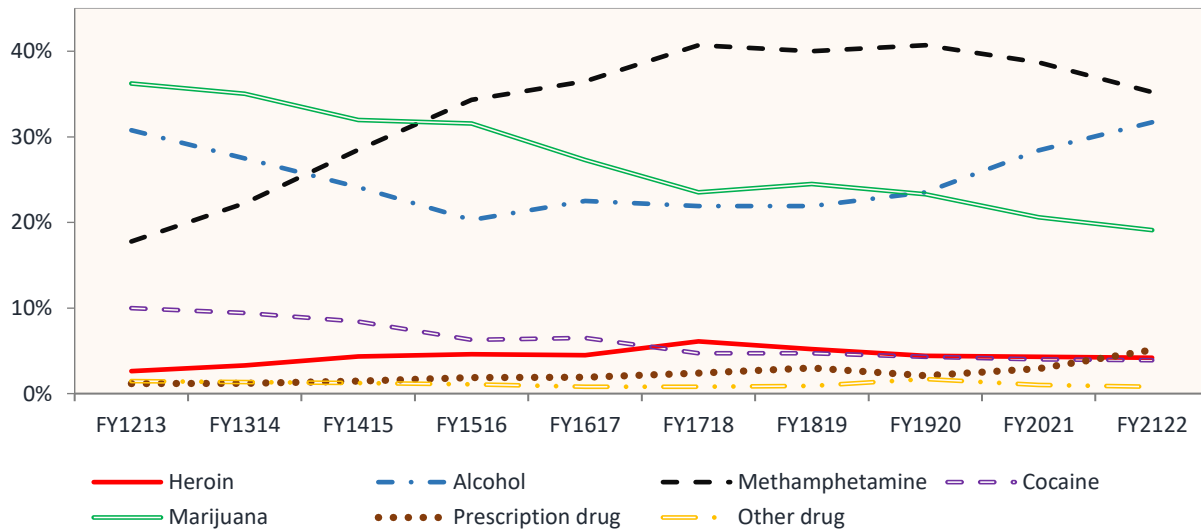

Table 3.4.4. Primary substance use among patients in outpatient programs, FY2122

PRIMARY SUBSTANCE USE	ADMISSIONS	%
Methamphetamine	4,161	35.2
Alcohol	3,757	31.7
Marijuana	2,257	19.1
Prescription drug	601	5.1
Heroin	496	4.2
Cocaine	466	3.9
Other drugs	98	0.8

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

There was a consistent downward trajectory in the proportion of primary marijuana admissions to outpatient programs. In contrast, primary methamphetamine admissions exhibited a steady and notable increase, reaching 35.2% in FY2122. In FY1415, methamphetamine surpassed alcohol, and in FY1516, methamphetamine surpassed marijuana as well and became the leading primary substance use at admission among outpatient admissions (Figure 3.4.2).

Figure 3.4.2. Trends in primary substance use among patients in outpatient programs

Patients in Opioid Treatment Programs (OTP)

TREATMENT ADMISSIONS AND DISCHARGES

There was 11,462 treatment admissions (9,726 patients) to opioid treatment programs, accounting for 21.7% of total admissions (Table 3.5.1). The average length of stay for opioid treatment program was 512.7 days (Table 1.7).

Table 3.5.1. Treatment admissions and discharges in opioid treatment programs, FY2122

	ADMISSIONS		PATIENTS	
	N	% of total admissions	N	% of total patients
Admitted	11,462	21.7	9,726	28.9
Discharged	4,263	11.3	3,502	14.8

Following a sustained period of growth, the number and proportion of admissions to opioid treatment programs experienced a notable decline starting from FY1617. This decline resulted in a significant decrease of 49.0%, with admissions dropping from 22,473 in FY1617 to 11,462 in FY2122 (Figure 3.5.1).

Figure 3.5.1. Trends in admissions and patients in opioid treatment programs

Of the discharges in the opioid treatment programs, 38.6% reported positive compliance, with 12.8% completing treatment and 25.9% leaving the program with satisfactory progress (Table 3.5.2).

Table 3.5.2. Discharge status of patients in opioid treatment programs, FY2122

DISCHARGE STATUS	ADMISSIONS	%
Positive compliance	1,488	38.6
Completed treatment	491	12.8
Left – satisfactory progress	997	25.9

(Left – unsatisfactory progress)		
Other (Death/incarceration/other)	98	2.5

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

PATIENT CHARACTERISTICS

The majority of patients in opioid treatment programs were male (67.0%), White (45.1%), ages 55-64 (23.8%), and unemployed (56.0%). 21.2% of the admissions reported having mental health issues, and 8.8% were homeless (Table 3.5.3).

PRIMARY SUBSTANCE USE AT ADMISSION

As shown in Table 3.5.4, the most common reported primary substance use in opioid treatment programs was heroin (72.0%), followed by prescription drug (28.0%).

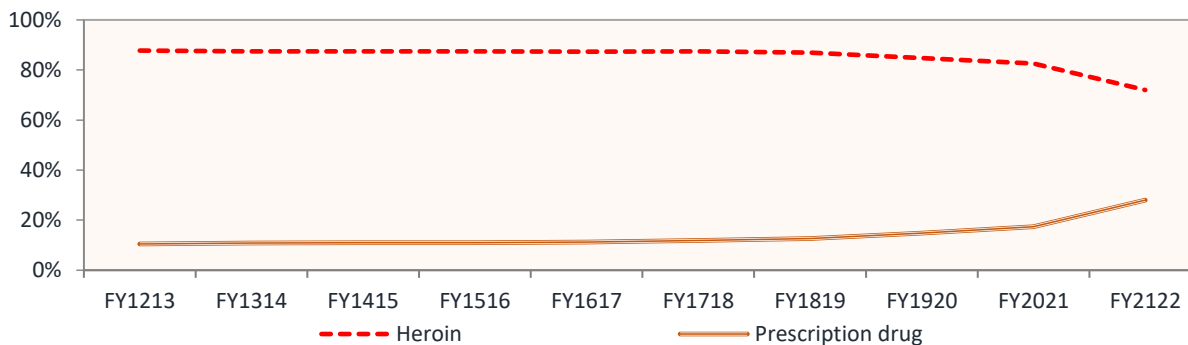

Table 3.5.4. Primary substance use among patients in opioid treatment programs, FY2122

PRIMARY SUBSTANCE USE	ADMISSIONS	%
Heroin	8,023	72.0
Prescription drug	3,123	28.0

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

In the last ten fiscal years, the majority of admissions to opioid treatment programs consistently reported heroin as the primary substance use, slightly decreasing from 87.7% in FY1213 to 72.0% in FY2122. The proportion of primary prescription drug admissions increased slightly during the same period from 10.5% in FY1213 to 28.0% in FY2122 (Figure 3.5.2).

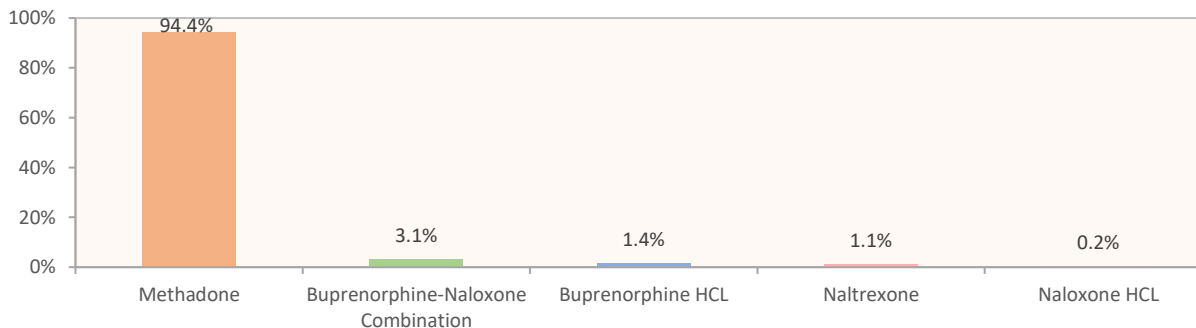

Figure 3.5.2. Trends in primary substance use among patients in opioid treatment programs

MEDICATIONS UTILIZED IN OTP PROGRAMS

Methadone is the most common medication (94.4%) provided to OTP patients, followed by the Buprenorphine-Naloxone combination (3.1%), Buprenorphine HCL (1.4%), Naltrexone (1.1%), and Naloxone HCL (0.2%) (Figure 3.5.3).

Figure 3.5.3. Medications provided at opioid treatment programs, FY2122

Chapter 4

Patient Characteristics by Service Planning Area¹

Chapter 4 provides descriptive information for patients from each of the eight **service planning areas (SPAs)**. For each SPA, numbers of patients, admissions and discharges are reported, along with trends in admission levels over the past ten years. Patient discharge status, demographic characteristics, primary substance use, and levels of care by SPA are also described.

¹ Patient SPA information is based on self-reported home address zip code. Numbers for each SPA may be lower than reality due to missing zip code information.

Patients from Service Planning Area 1 (SPA 1)

TREATMENT ADMISSIONS AND DISCHARGES

There were 2,332 treatment admissions for 1,752 patients residing in SPA 1, accounting for 4.4% of all admissions (Table 4.1.1).

Table 4.1.1. Treatment admissions and discharges among patients from SPA 1, FY2122

	ADMISSIONS		PATIENTS	
	N	% of total admissions	N	% of total patients
Admitted	2,332	4.4	1,752	5.2
Discharged	1,485	3.9	1,124	4.7

The number and proportion of admissions experienced a steady decline from 2,745 (6.0%) in FY1415 to 1,657 (3.5%) in FY1819, before experiencing an increase to 2,332 (4.4%) in FY2122. The number and proportion of patients showed a similar trend (Figure 4.1.1).

Figure 4.1.1. Trends in admissions and patients from SPA 1

Among SPA 1 patient discharges, 53.2% had positive compliance, with 37.5% completing treatment and 15.7% leaving the program with satisfactory progress (Table 4.1.2).

Table 4.1.2. Discharge status of patients from SPA 1, FY2122

DISCHARGE STATUS	ADMISSIONS	%
Positive compliance	596	53.2
Completed treatment	420	37.5
Left – satisfactory progress	176	15.7
Negative compliance	486	43.4
(Left – unsatisfactory progress)		
Other (Death/incarceration/other)	39	3.5

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

PATIENT CHARACTERISTICS

The majority of patients residing in SPA 1 were male (56.1%), Latinx (42.3%), ages 26-34 (33.9%), and unemployed (68.4%). Among SPA 1 admissions, 63.0% reported mental health issues, and 21.6% reported criminal justice involvement (Table 4.1.3).

PRIMARY SUBSTANCE USE AT ADMISSION

As shown in Table 4.1.4, the most commonly reported primary substance use was prescription drug (22.3%), followed by heroin (21.8%) and alcohol (21.5%).

Table 4.1.4. Primary substance use among patients from SPA 1, FY2122

PRIMARY SUBSTANCE USE	ADMISSIONS	%
Prescription drug	495	22.3

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

From FY1213 to FY1415, marijuana was the primary substance used among admissions. However, starting in FY1516, primary heroin admissions exhibited a continuous increase, making it the most prevalent primary substance used until FY2021. In FY2122, primary prescription drug admissions surpassed heroin, accounting for the highest proportion at 22.3%. Throughout the entire period, methamphetamine consistently ranked as the second most common primary substance, with admissions remaining relatively stable (Figure 4.1.2).

Figure 4.1.2. Trends in primary substance use among patients from SPA 1

LEVEL OF CARE

As shown in Table 4.1.5, the most common level of care among patients residing in SPA 1 was opioid treatment programs (33.6%), followed by outpatient service programs (31.1%) and residential service programs (14.6%).

Table 4.1.5. Level of care among patients from SPA 1, FY2122

From FY1213 to FY1718, the outpatient program was the predominant level of care for patients residing in SPA 1. Its proportion varied between 26.4% and 56.6% over the past ten fiscal years, displaying a gradual decline. Notably, admissions to opioid treatment programs witnessed a significant increase from 14.3% in FY1213 to 33.6% in FY2122, surpassing outpatient as the primary level of care starting from FY1819. Meanwhile, the proportion of admissions to residential service programs remained relatively stable throughout the decade, except for a notable spike to 27.6% in FY1718 (Figure 4.1.3).

Figure 4.1.3. Trends in level of care among patients from SPA 1

Patients from Service Planning Area 2 (SPA 2)

TREATMENT ADMISSIONS AND DISCHARGES

There were 7,246 treatment admissions for 5,300 patients residing in SPA 2, accounting for 13.6% of all admissions (Table 4.2.1).

Table 4.2.1. Treatment admissions and discharges among patients from SPA 2, FY2122

	ADMISSIONS		PATIENTS	
	N	% of total admissions	N	% of total patients
Admitted	7,246	13.6	5,300	15.7
Discharged	4,859	12.9	3,514	14.8

The proportion of admissions decreased from 19.9% in FY1415 to 13.1% in FY1718 then remained relatively stable through FY2122. A similar trend was observed in the proportion of patients. Overall, both the number of admissions and patients exhibited a slight decrease over the past ten fiscal years (Figure 4.2.1).

Figure 4.2.1. Trends in admissions and patients from SPA 2

Among SPA 2 patient discharges, 56.8% had positive compliance, with 42.1% completing treatment and 14.7% leaving the program with satisfactory progress (Table 4.2.2).

PRIMARY SUBSTANCE USE AT ADMISSION

As shown in Table 4.2.4, the most common primary substance use was heroin (33.2%), followed by alcohol (26.1%) and methamphetamine (16.5%).

Table 4.2.4. Primary substance use among patients from SPA 2, FY2122

PRIMARY SUBSTANCE USE	ADMISSIONS	%
Heroin	2,280	33.2
Alcohol	1,797	26.1

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

Throughout the past ten fiscal years, heroin consistently emerged as the predominant primary substance used among admissions in SPA 2. The proportion of primary heroin admissions displayed a significant increase from 28.5% in FY1213 to 47.2% in FY1617, followed by a decrease to 33.2% in FY2122. The proportion of marijuana admissions exhibited a declining trend during the same period. In recent years, there has been a gradual increase in the proportion of primary alcohol and prescription drug admissions, while the proportion of methamphetamine admissions remained relatively stable (Figure 4.2.2).

Figure 4.2.2. Trends in primary substance use among patients from SPA 2

LEVEL OF CARE

As shown in Table 4.2.5, the most common level of care among patients residing in SPA 2 was opioid treatment programs (32.2%), followed by outpatient programs (24.6%) and withdrawal management programs (14.2%).

Table 4.2.5. Level of care among patients from SPA 2, FY2122

From FY1213 to FY1415, the outpatient program stood as the primary level of care for patients in SPA2. However, a noticeable shift occurred as admissions to opioid treatment programs gradually surpassed outpatient programs from FY1516 to FY2122 (Figure 4.2.3).

Figure 4.2.3. Trends in level of care among patients from SPA 2

Patients from Service Planning Area 3 (SPA 3)

TREATMENT ADMISSIONS AND DISCHARGES

There were 5,972 treatment admissions for 4,688 patients residing in SPA 3, accounting for 11.2% of all admissions (Table 4.3.1).

Table 4.3.1. Treatment admissions and discharges among patients from SPA 3, FY2122

	ADMISSIONS		PATIENTS	
	N	% of total admissions	N	% of total patients
Admitted	5,972	11.2	4,688	13.9
Discharged	3,831	10.1	2,976	12.5

From FY1213 to FY1617, the number and proportion of admissions in SPA 3 remained stable. However, there was a significant increase in admissions from 5,551 in FY1617 to 8,460 in FY1718, followed by a decrease to 5,444 in FY1819. Subsequently, admissions remained relatively stable through FY2122 (Figure 4.3.1).

Figure 4.3.1. Trends in admissions and patients from SPA 3

Among SPA 3 patient discharges, 46.7% had positive compliance, with 33.3% completing treatment and 13.4% leaving the program with satisfactory progress (Table 4.3.2).

Table 4.3.2. Discharge status of patients from SPA 3, FY2122

PRIMARY SUBSTANCE USE AT ADMISSION

As shown in Table 4.3.4, the most commonly reported primary substance use was heroin (28.7%), followed by methamphetamine (24.1%) and alcohol (22.1%).

Table 4.3.4. Primary substance use among patients from SPA 3, FY2122

PRIMARY SUBSTANCE USE	ADMISSIONS	%
Heroin	1,666	28.7
Methamphetamine	1,396	24.1
Alcohol	1,282	22.1

Marijuana	511	8.8
Cocaine	116	2.0
Other drugs	23	0.4

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

The proportion of primary heroin admissions increased continuously from 31.9% in FY1213 to 43.7% in FY1617, then decreased to 28.7% in FY2122. From FY1213 to FY1718 and again in FY2122, heroin was the most common primary substance use among patients residing in SPA 3. From FY1819 to FY2021, methamphetamine surpassed heroin and became slightly more commonly reported (Figure 4.3.2).

Figure 4.3.2. Trends in primary substance use among patients from SPA 3

LEVEL OF CARE

As shown in Table 4.3.5, the most common level of care among patients residing in SPA 3 was opioid treatment programs (32.2%), followed by outpatient programs (27.8%) and residential service programs (19.1%).

Table 4.3.5. Level of care among patients from SPA 3, FY2122

LEVEL OF CARE	ADMISSIONS	%

Outpatient (ASAM 1.0)	1,655	27.8
Opioid Treatment Program (ASAM OTP)	1,920	32.2
Recovery Support Service	258	4.3

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

The outpatient program and opioid treatment program have alternated as the most common levels of care over the past ten fiscal years. In FY2122, the majority of admissions (32.2%) were to the opioid treatment programs. However, there has been a consistent decrease in admissions to the outpatient programs over time. The proportion of admission to the residential service programs remained stable from FY1213 to FY1617 then increased slightly from FY1617 to FY2122 (Figure 4.3.3).

Figure 4.3.3. Trends in level of care among patients from SPA 3

Patients from Service Planning Area 4 (SPA 4)

TREATMENT ADMISSIONS AND DISCHARGES

There were 4,137 treatment admissions for 3,297 patients residing in SPA 4, accounting for 7.7% of all admissions (Table 4.4.1).

Table 4.4.1. Treatment admissions and discharges among patients from SPA 4, FY2122

	ADMISSIONS		PATIENTS	
	N	% of total admissions	N	% of total patients
Admitted	4,137	7.7	3,297	9.8
Discharged	2,659	7.0	2,112	8.9

Both the number and proportion of admissions remained relatively stable from FY1213 to FY1415. The proportion of admissions decreased noticeably from 14.0% in FY1415 to 7.7% in FY2122 (Figure 4.4.1).

Figure 4.4.1. Trends in admissions and patients from SPA 4

Among SPA 4 patient discharges, 48.5% had positive compliance, with 34.8% completing treatment and 13.8% leaving the program with satisfactory progress (Table 4.4.2).

PRIMARY SUBSTANCE USE AT ADMISSION

As shown in Table 4.4.4, the most common primary substance use among patients residing in SPA 4 was heroin (25.6%), followed by methamphetamine (25.4%) and alcohol (24.6%).

Table 4.4.4. Primary substance use among patients from SPA 4, FY2122

PRIMARY SUBSTANCE USE	ADMISSIONS	%
Heroin	1,003	25.6
Methamphetamine	993	25.4
Alcohol	964	24.6
Prescription drug	465	11.9
Marijuana	333	8.5
Cocaine	132	3.4
Other drugs	27	0.7

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

The proportion of primary heroin admissions increased rapidly from 31.2% in FY1213 to 55.0% in FY1617 and decreased to 25.6% in FY2122. Heroin was the leading primary substance use for nine of the past ten fiscal years, with methamphetamine surpassing it slightly in FY2021. The proportions of methamphetamine and alcohol admissions increased steadily in recent years (Figure 4.4.2).

Figure 4.4.2. Trends in primary substance use among patients from SPA 4

LEVEL OF CARE

As shown in Table 4.4.5, the most common level of care among patients residing in SPA 4 was opioid treatment programs (28.9%), followed by outpatient programs (26.8%) and residential service programs (21.4%).

Table 4.4.5. Level of care among patients from SPA 4, FY2122

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.
N ≤ 5 not reported to protect confidentiality.

The outpatient program and opioid treatment program have alternated as the most common levels of care over the past ten fiscal years. However, there has been a decrease trend in admissions to the outpatient programs over time. The proportion of admission to the residential service programs increased from 7.7% in FY1617 to 21.4% in FY2122 (Figure 4.4.3).

Figure 4.4.3. Trends in level of care among patients from SPA 4

Patients from Service Planning Area 5 (SPA 5)

TREATMENT ADMISSIONS AND DISCHARGES

There were 1,013 treatment admissions for 780 patients residing in SPA 5, accounting for 1.9% of all admissions (Table 4.5.1).

Table 4.5.1. Treatment admissions and discharges among patients from SPA 5, FY2122

	ADMISSIONS		PATIENTS	
	N	% of total admissions	N	% of total patients
Admitted	1,013	1.9	780	2.3
Discharged	645	1.7	472	2.0

The number of admissions and patients showed an overall decreasing trend over the past ten fiscal years. The proportion of admissions and patients both fluctuated but also revealed a downward trend (Figure 4.5.1).

Figure 4.5.1. Trends in admissions and patients from SPA 5

Among SPA 5 patient discharges, 60.4% had positive compliance, with 46.3% completing treatment and 14.1% leaving the program with satisfactory progress (Table 4.5.2).

PRIMARY SUBSTANCE USE AT ADMISSION

As shown in Table 4.5.4, the most commonly reported primary substance use was heroin (30.7%), followed by alcohol (27.9%) and prescription drug (22.5%).

Table 4.5.4. Primary substance use among patients from SPA 5, FY2122

PRIMARY SUBSTANCE USE	ADMISSIONS	%
Heroin	301	30.7
Alcohol	274	27.9

The proportion of primary heroin admissions residing in SPA 5 increased from 43.1% in FY1213 to 62.4% in FY1516, and then decreased to 30.7% in FY2122. Heroin was the leading primary substance use for all ten fiscal years. The proportion of primary alcohol admissions increased markedly since FY1617, and the proportion of primary prescription drug admissions has been rising since FY2021 (Figure 4.5.2).

Figure 4.5.2. Trends in primary substance use among patients from SPA 5

LEVEL OF CARE

As shown in Table 4.5.5, the most common level of care among patients residing in SPA 5 was opioid treatment programs (37.3%), followed by residential service programs (20.4%) and outpatient programs (15.9%).

Table 4.5.5. Level of care for among patients from SPA 5, FY2122

N ≤ 5 not reported to protect confidentiality

Over the past ten fiscal years, the opioid treatment program remained the most common level of care for admissions among patients residing in SPA 5. The proportion of admissions to opioid treatment programs increased from 48.4% in FY1213 to 71.1% in FY1516, decreased to 29.8% in FY1819, and went back up to 37.3% in FY2122. The proportion of admissions to outpatient programs showed an overall decreasing trend, while the proportion of admissions to residential service programs increased from 7.3% in FY1617 to 20.4% in FY2122 (Figure 4.5.3).

Figure 4.5.3. Trends in level of care among patients from SPA 5

Patients from Service Planning Area 6 (SPA 6)

TREATMENT ADMISSIONS AND DISCHARGES

There were 4,419 treatment admissions for 3,497 patients residing in SPA 6, accounting 8.3% of all admissions (Table 4.6.1).

Table 4.6.1. Treatment admissions and discharges among patients from SPA 6, FY2122

	ADMISSIONS		PATIENTS	
	N	% of total admissions	N	% of total patients
Admitted	4,419	8.3	3,497	10.4
Discharged	2,996	7.9	2,422	10.2

The number and proportion of admissions decreased from 12,909 (22.2%) in FY1213 to 4,419 (8.3%) in FY2122 (Figure 4.6.1).

Figure 4.6.1. Trends in admissions and patients from SPA 6

Among SPA 6 patient discharges, 45.6% had positive compliance, with 33.8% completing treatment and 11.8% leaving the program with satisfactory progress (Table 4.6.2).

PRIMARY SUBSTANCE USE AT ADMISSION

As shown in Table 4.6.4, the most commonly reported primary substance use was methamphetamine (30.3%), followed by alcohol (22.7%) and marijuana (16.3%).

Table 4.6.4. Primary substance use among patients from SPA 6, FY2122

PRIMARY SUBSTANCE USE	ADMISSIONS	%
Methamphetamine	1,295	30.3
Alcohol	969	22.7

Cocaine	197	4.6
Other drugs	49	1.1

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

From FY1213 to FY1415, marijuana was the predominant primary substance reported, although its proportion steadily declined over the past decade. In FY1516 and FY1617, primary heroin admissions experienced a significant surge, surpassing marijuana as the most prevalent primary substance use. Conversely, primary methamphetamine admissions exhibited an overall increasing trend over the last ten fiscal years. Starting from FY1718, methamphetamine surpassed heroin as the leading primary substance use among patients in SPA 6 (Figure 4.6.2).

Figure 4.6.2. Trends in primary substance use among patients from SPA 6

LEVEL OF CARE

As shown in Table 4.6.5, the most common level of care among patients residing in SPA 6 was outpatient programs (34.1%), followed by opioid treatment programs (19.8%) and residential service programs (19.0%).

Table 4.6.5. Level of care among patients from SPA 6, FY2122

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

Throughout the past ten fiscal years, outpatient program consistently maintained the position as the prevailing level of care for patients in SPA 6. However, the proportion of admissions to outpatient programs displayed a continuous decline, decreasing from 65.3% in FY1213 to 34.1% in FY2122. In contrast, admissions to opioid treatment programs witnessed a rapid increase from 11.3% in FY1213 to 37.8% in FY1617, followed by a subsequent decrease to 19.8% in FY2122 (Figure 4.6.3).

Figure 4.6.3. Trends in level of care among patients from SPA 6

Patients from Service Planning Area 7 (SPA 7)

TREATMENT ADMISSIONS AND DISCHARGES

There were 4,126 treatment admissions for 3,200 patients residing in SPA 7, accounting for 7.7% of all admissions (Table 4.7.1).

Table 4.7.1. Treatment admissions and discharges among patients from SPA 7, FY2122

	ADMISSIONS		PATIENTS	
	N	% of total admissions	N	% of total patients
Admitted	4,126	7.7	3,200	9.5
Discharged	2,697	7.1	2,069	8.7

The number and proportion of admissions revealed an overall decreasing trend over the past ten fiscal years from 7,116 (12.2%) in FY1213 to 4,126 (7.7%) in FY2122, with some fluctuations in between (Figure 4.7.1).

Figure 4.7.1. Trends in admissions and patients from SPA 7

Among SPA 7 patient discharges, 49.3% had positive compliance, with 35.8% completing treatment and 13.5% leaving the program with satisfactory progress (Table 4.7.2).

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

From FY1213 to FY1617, there was a significant increase in the proportion of primary heroin admissions, followed by a subsequent decrease until FY2122. Throughout FY1314 to FY1920 and again in FY2122, heroin remained the predominant primary substance among patients residing in SPA 7. Conversely, the proportion of primary methamphetamine admissions demonstrated a steady rise over the past ten fiscal years and surpassed heroin as the most common primary substance in FY2021 (Figure 4.7.2).

Figure 4.7.2. Trends in primary substance use among patients from SPA 7

LEVEL OF CARE

As shown in Table 4.7.5, the most common level of care among patients residing in SPA 7 was opioid treatment programs (31.2%), followed by outpatient programs (29.5%) and residential service programs (17.8%).

Table 4.7.5. Level of care among patients from SPA 7, FY2122

LEVEL OF CARE	ADMISSIONS	%

Recovery Support Service	230	5.6

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

For most of the years, the outpatient program was the most common level of care for admissions in SPA 7, with a decreasing trend from 58.3% in FY1213 to 29.5% in FY2122. The proportion of patients admitted to opioid treatment programs showed an overall increasing trend from 26.9% in FY1213 to 44.6% in FY1617 and decreased to 31.2% in FY2122. In FY1617, FY1718, and FY2122, the opioid treatment program surpassed outpatient program as the most common level of care for patients in SPA 7 (Figure 4.7.3).

Figure 4.7.3. Trends in level of care among patients from SPA 7

Patients from Service Planning Area 8 (SPA 8)

TREATMENT ADMISSIONS AND DISCHARGES

There were 4,884 treatment admissions for 3,785 patients residing in SPA 8, accounting for 9.1% of all admissions (Table 4.8.1).

Table 4.8.1. Treatment admissions and discharges among patients from SPA 8, FY2122

	ADMISSIONS		PATIENTS	
	N	% of total admissions	N	% of total patients
Admitted	4,884	9.1	3,785	11.2
Discharged	2,984	7.9	2,331	9.8

The number of admissions decreased by 45.7% from 8,991 in FY1213 to 4,884 in FY2122, and the proportion of admissions showed an overall decreasing trend through FY2122 (Figure 4.8.1).

Figure 4.8.1. Trends in admissions and patients from SPA 8

Among SPA 8 patient discharges, 48.2% had positive compliance, with 35.6% completing treatment and 12.7% leaving the program with satisfactory progress (Table 4.8.2).

PRIMARY SUBSTANCE USE AT ADMISSION

As shown in Table 4.8.4, the most common primary substance use among patients residing in SPA 8 was heroin (25.3%), followed by alcohol (23.3%) and methamphetamine (20.7%).

Table 4.8.4. Primary substance use among patients from SPA 8, FY2122

PRIMARY SUBSTANCE USE	ADMISSIONS	%
Heroin	1,184	25.3
Alcohol	1,090	23.3
Methamphetamine	968	20.7

Marijuana	492	10.5
Cocaine	157	3.4
Other drugs	39	0.8

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

In SPA 8, heroin was the primary substance most commonly reported by patients for the majority of the years, except FY1213. There was a general upward trend in primary heroin admissions from FY1213 to FY1617, followed by a decrease in subsequent years. Additionally, primary alcohol and prescription drugs admissions showed a noticeable increase in recent years (Figure 4.8.2).

Figure 4.8.2. Trends in primary substance use among patients from SPA 8

LEVEL OF CARE

SPA 8 patients were most commonly admitted to opioid treatment programs (31.7%), followed by outpatient programs (24.2%) and residential service programs (17.2%) (Table 4.8.5).

The outpatient program and opioid treatment program have alternated as the most common levels of care over the past ten fiscal years. However, there has been a consistent decline in admissions to the outpatient programs over time. Admissions to the residential programs increased in FY1718 and have remained relatively stable thereafter (Figure 4.8.3).

Chapter 5

Patient Characteristics by Supervisorial District²

Chapter 5 provides descriptive information for patients from each of the five **supervisorial districts (SDs)**. For each SD, numbers of patients, admissions and discharges are reported, along with trends in admissions over the past ten years. Patient discharge status, demographic characteristics, primary substance use, and levels of care by SD are also described.

² Patient SD information is based on self-reported home address zip code. Numbers for each SD may be lower than reality due to missing zip code information.

Patients from Supervisorial District 1 (SD 1)

TREATMENT ADMISSIONS AND DISCHARGES

There were 7,358 treatment admissions for 5,856 patients residing in SD 1, accounting for 13.8% of all admissions and 17.4% of all patients (Table 5.1.1).

Table 5.1.1. Treatment admissions and discharges among patients from SD 1, FY2122

	ADMISSIONS		PATIENTS	
	N	% of total admissions	N	% of total patients
Admitted	7,358	13.8	5,856	17.4
Discharged	4,578	12.1	3,595	15.1

The number of admissions and patients decreased overall during the past ten fiscal years. However, the proportion of all admissions remained stable until FY1617, fluctuated between FY1718 and FY1920, then decreased slightly over the last three fiscal years (Figure 5.1.1).

Figure 5.1.1. Trends in admissions and patients from SD 1

Among the SD1 patient discharges, 44.9% had positive compliance, with 31.4% completing treatment and 13.6% leaving the program with satisfactory progress (Table 5.1.2).

Table 5.1.2. Discharge status of patients from SD 1, FY2122

DISCHARGE STATUS	ADMISSIONS	%
Positive compliance	1,830	44.9
Completed treatment	1,278	31.4
Left – satisfactory progress	552	13.6
Negative compliance	1,911	46.9
(Left – unsatisfactory progress)		
Other (Death/incarceration/other)	332	8.2

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

PATIENT CHARACTERISTICS

The majority of patients residing in SD 1 were male (61.0%), Latinx (70.3%), ages 26-34 (28.4%), and unemployed (58.0%) (Table 5.1.3). Among SD 1 admissions, 35.0% reported mental health issues, and 22.5% were involved in the criminal justice system.

PRIMARY SUBSTANCE USE AT ADMISSION

The most commonly reported primary substance use was heroin (29.8%), followed by methamphetamine (25.5%) and alcohol (20.9%) (Table 5.1.4).

Table 5.1.4. Primary substance use among patients from SD 1, FY2122

PRIMARY SUBSTANCE USE	ADMISSIONS	%
Heroin	2,084	29.8
Methamphetamine	1,785	25.5
Alcohol	1,461	20.9
Prescription drug	765	10.9
Marijuana	685	9.8
Cocaine	184	2.6
Other drugs	34	0.5

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

The proportion of patients reporting heroin as the primary substance use increased from FY1213 to FY1617, then decreased to 29.8% in FY2122. Methamphetamine’s use gradually increased from 16.9% in FY1213 to 25.5% in FY2122. The proportion reporting marijuana as the primary substance gradually decreased from FY1213 to FY2122 (Figure 5.1.2).

Figure 5.1.2. Trends in primary substance use among patients from SD 1

LEVEL OF CARE

Patients residing in SD 1 were most commonly admitted to opioid treatment programs (33.7%), followed by outpatient programs (29.3%) and residential service programs (17.9%) (Table 5.1.5).

Table 5.1.5. Level of care among patients from SD 1, FY2122

Recovery Support Service	328	4.5

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.
N ≤ 5 not reported to protect confidentiality.

Over the past decade, the outpatient and opioid treatment programs have taken turns as the most common levels of care. In FY2122, the majority of admissions (33.7%) were to opioid treatment programs. The proportion of admissions to the outpatient program has consistently decreased, while there has been a significant increase in the proportion of admissions to residential service programs since FY1718 (Figure 5.1.3).

Figure 5.1.3. Trends in level of care among patients from SD 1

Patients from Supervisorial District 2 (SD 2)

TREATMENT ADMISSIONS AND DISCHARGES

There were 7,174 treatment admissions for 5,577 patients residing in SD 2, accounting for 13.4% of all admissions and 16.5% of all patients (Table 5.2.1).

Table 5.2.1. Treatment admissions and discharges among patients from SD 2, FY2122

	ADMISSIONS		PATIENTS	
	N	% of total admissions	N	% of total patients
Admitted	7,174	13.4	5,577	16.5
Discharged	4,775	12.6	3,781	15.9

The number and proportion of admissions decreased from 17,206 (23.5%) in FY1213 to 7,174 (13.4%) in FY2122 (Figure 5.2.1).

Figure 5.2.1. Trends in admissions and patients from SD 2

Among the SD2 patient discharges, 48.0% had positive compliance, with 35.1% completing treatment and 12.9% leaving the program with satisfactory progress (Table 5.2.2).

Table 5.2.2. Discharge status of patients from SD 2, FY2122

DISCHARGE STATUS	ADMISSIONS	%
Positive compliance	2,073	48.0
Completed treatment	1,516	35.1

(Left – unsatisfactory progress)		
Other (Death/incarceration/other)	364	8.4

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

PATIENT CHARACTERISTICS

As shown in Table 5.2.3, the majority of patients from SD 2 were male (59.2%), Latinx (49.6%), ages 26-34 (31.3%), and unemployed (54.2%). Among SD 2 admissions, 44.1% reported having mental health issues, and 16.5% reported having a disability.

PRIMARY SUBSTANCE USE AT ADMISSION

The most common primary substance use was methamphetamine (27.2%), followed alcohol (23.9%) and by heroin (18.2%) (Table 5.2.4).

Table 5.2.4. Primary substance use among patients from SD 2, FY2122

PRIMARY SUBSTANCE USE	ADMISSIONS	%
Methamphetamine	1,882	27.2
Alcohol	1,654	23.9
Heroin	1,260	18.2
Marijuana	979	14.1
Prescription drug	768	11.1
Cocaine	314	4.5
Other drugs	73	1.1

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

In SD 2, there has been a shift in the leading primary drug admissions over the years, with marijuana, heroin, and methamphetamine taking turns. The proportion of primary marijuana admissions showed a decreasing trend, while primary methamphetamine admissions exhibited an increasing trend. The proportion of primary heroin admissions increased until FY1617 and then decreased to 18.2% in FY2122 (Figure 5.2.2).

Figure 5.2.2. Trends in primary substance use among patients from SD 2

LEVEL OF CARE

The most common level of care that patients residing in SD 2 were admitted to included outpatient programs (31.4%), followed by opioid treatment programs (22.8%) and residential services (19.6%) (Table 5.2.5).

Table 5.2.5. Level of care among patients from SD 2, FY2122

LEVEL OF CARE	ADMISSIONS	%
Withdrawal Management	395	5.5
ASAM WM 2	8	0.1
ASAM WM 3.2	243	3.4
ASAM WM 3.7/4.0	144	2.0

ASAM 3.1	631	8.9
ASAM 3.3	9	0.1
ASAM 3.5	757	10.6
Intensive Outpatient (ASAM 2.1)	1,044	14.7
Outpatient (ASAM 1.0)	2,241	31.4
Opioid Treatment Program (ASAM OTP)	1,626	22.8
Recovery Support Service	423	5.9

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

In the past ten fiscal years, the outpatient program has consistently been the most common level of care. However, in FY1617, there was a notable shift as the proportion of admissions to opioid treatment programs surpassed that of outpatient programs. The proportion of admissions to residential service programs experienced a notable increase in FY1718 and remained stable thereafter (Figure 5.2.3).

Figure 5.2.3. Trends in level of care among patients from SD 2

Patients from Supervisorial District 3 (SD 3)

TREATMENT ADMISSIONS AND DISCHARGES

There were 5,472 treatment admissions for 4,128 patients residing in SD 3, accounting for 10.3% of all admissions and 12.2% of all patients (Table 5.3.1).

Table 5.3.1. Treatment admissions and discharges among patients from SD 3, FY2122

	ADMISSIONS		PATIENTS	
	N	% of total admissions	N	% of total patients
Admitted	5,472	10.3	4,128	12.2
Discharged	3,567	9.4	2,661	11.2

The number of admissions decreased from FY1213 to FY1718 and stabilized through FY2122, while the proportion of all admissions remained relatively stable throughout the entire time period (Figure 5.3.1).

Figure 5.3.1. Trends in admissions and patients from SD 3

Among the SD3 patient discharges, 56.9% had positive compliance, with 42.1% completing treatment and 14.8% leaving the program with satisfactory progress (Table 5.3.2).

Table 5.3.1. Discharge status of patients from SD 3, FY2122

Marijuana	347	6.7
Cocaine	103	2.0
Other drugs	19	0.4

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

Over the past ten fiscal years, heroin was the most common primary substance use. The proportion of primary heroin admissions increased steadily from FY1213 to FY1617, then decreased through FY2122. The proportion reporting marijuana as the primary substance use declined from FY1213, while the reporting of methamphetamine increased gradually from FY1213 to FY1819 and then decreased slightly through FY2122 (Figure 5.3.2).

Figure 5.3.2. Trends in primary substance use among patients from SD 3

LEVEL OF CARE

The most common level of care that patients residing in SPA 3 was admitted to was opioid treatment programs (32.0%), followed by outpatient programs (26.3%) and residential services (13.3%) (Table 5.3.5).

Table 5.3.4. Level of care among patients from SD 3, FY2122

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.
N ≤ 5 not reported to protect confidentiality.

The proportion of admissions to opioid treatment programs exhibited an upward trend from FY1213 to FY1617, followed by a decrease until FY1819, and subsequently stabilized through FY2122. Opioid treatment programs consistently surpassed outpatient programs as the most common level of care from FY1415 to FY2122, with the exception of FY1819. On the other hand, admissions to outpatient programs showed a gradual decline over the past decade (Figure 5.3.3).

Figure 5.3.3. Trends in level of care among patients from SD 3

Patients from Supervisorial District 4 (SD 4)

TREATMENT ADMISSIONS AND DISCHARGES

There were 6,537 treatment admissions for 5,060 patients residing in SD 4, accounting for 12.2% of all admissions and 15.0% of all patients (Table 5.4.1).

Table 5.4.1. Treatment admissions and discharges among patients from SD 4, FY2122

	ADMISSIONS		PATIENTS	
	N	% of total admissions	N	% of total patients
Admitted	6,537	12.2	5,060	15.0
Discharged	4,141	11.0	3,206	13.5

The proportion of admissions and patients remained relatively stable from FY1213 to FY1415 and began to fluctuate slightly thereafter before stabilizing again from FY1718 to FY2122 (Figure 5.4.1).

Figure 5.4.1. Trends in admissions and patients from SD 4

Among the SD 4 patient discharges, 48.1% of admissions had positive compliance, with 35.3% completing treatment and 12.8% leaving the program with satisfactory progress (Table 5.4.2).

Table 5.4.2. Discharge status of patients from SD 4, FY2122

Marijuana	656	10.4
Cocaine	140	2.2
Other drugs	45	0.7

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

Heroin was the primary substance use with the highest proportion of admissions over the past ten fiscal years, with a notable increase from FY1213 to FY1617 and a decrease thereafter to 25.3% in FY2122. Marijuana admissions displayed an overall declining trend from FY1213 to FY2122, while methamphetamine admissions remained stable in the last five fiscal years (Figure 5.4.2).

Figure 5.4.2. Trends in primary substance use among patients from SD 4

LEVEL OF CARE

The most common level of care that patients residing in SPA 4 was opioid treatment programs (30.9%), followed by outpatient programs (25.5%) and residential service programs (18.5%) (Table 5.4.5).

Table 5.4.5. Level of care among patients from SD 4, FY2122

 N ≤ 5 not reported to protect confidentiality.

The outpatient program and opioid treatment program have alternated as the most common levels of care over the past ten fiscal years. However, there has been a consistent decrease in the proportion of admissions to outpatient programs over time. Conversely, there has been a notable increase in the proportion of admissions to residential service programs since FY1718 (Figure 5.4.3).

Figure 5.4.3. Trends in level of care among patients from SD 4

Patients from Supervisorial District 5 (SD 5)

TREATMENT ADMISSIONS AND DISCHARGES

There were 7,588 treatment admissions for 5,634 patients residing in SD 5, accounting for 14.2% of all admissions and 16.7% of all patients (Table 5.5.1).

Table 5.5.1. Treatment admissions and discharges among patients from SPA 5, FY2122

	ADMISSIONS		PATIENTS	
	N	% of total admissions	N	% of total patients
Admitted	7,588	14.2	5,634	16.7
Discharged	5,095	13.5	3,754	15.8

The proportion of admissions and patients remained relatively stable from FY1213 to FY1617, with a noticeable spike in FY1718. Thereafter, the proportion stabilized again from FY1819 to FY2122 (Figure 5.5.1).

Figure 5.5.1. Trends in admissions and patients from SD 5

Among the SD 5 patient discharges, 54.5% had positive compliance, with 40.5% completing treatment and 14.0% leaving the program with satisfactory progress (Table 5.5.2).

Marijuana	485	6.7
Cocaine	153	2.1
Other drugs	33	0.5

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

The proportion of primary heroin admissions exhibited a significant increase from FY1213 to FY1718, declining thereafter until FY2122. Heroin consistently ranked as the leading primary substance use since FY1213. Conversely, the proportion of primary marijuana admissions decreased from 22.7% in FY1213 to 6.7% in FY2122. The proportion of alcohol has been on a steady increase since FY1617 (Figure 5.5.2).

Figure 5.5.2. Trends in primary substance use among patients from SD 5

LEVEL OF CARE

The most common level of care that patients residing in SD 5 were admitted to was opioid treatment programs (32.0%), followed by outpatient programs (24.0%) and residential service programs (17.3%) (Table 5.5.5).

Chapter 6

Patient Characteristics by Special Population

Chapter 6 provides the number of admissions and discharges, discharge status, patient characteristics, primary substance use, levels of care at admission, and 10-year trends for youth (12-17 yrs), transitional age youth (16-25 yrs), older adults (65+ yrs), criminal justice involved, patients experiencing homelessness, patients with disabilities, lesbian/gay/bisexual/transgender/questioning patients, women of reproductive age (15-49 years), veterans, and patients enrolled in My Health LA.

Youth

TREATMENT ADMISSIONS AND DISCHARGES

There were 1,153 (2.2%) youth patients, who accounted for 986 (2.9%) treatment admissions (Table 6.1.1).

Table 6.1.1. Treatment admissions and discharges among youth patients, FY2122

	ADMISSIONS		PATIENTS	
	N	% of total admissions	N	% of total patients
Admitted	1,153	2.2	986	2.9
Discharged	766	2.0	670	2.8

The number and proportion of youth patients and admissions decreased remarkably in the past ten years. The number and proportion of patients decreased from 11,126 (18.6%) in FY1213 to 986 (2.9%) in FY2122 (Figure 6.1.1).

Figure 6.1.1. Trends in youth admissions and patients

PATIENT CHARACTERISTICS

The majority of youth were male (63.3%), Latinx (74.6%), and age of 17 (36.4%). Among youth admissions, 32.5% had mental health issues, and 23.3% were involved in the criminal justice system (Table 6.1.2).

	No	860	76.7

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.
 N ≤ 5 not reported to protect confidentiality.

PRIMARY SUBSTANCE USE AT ADMISSION

The most commonly reported primary substance use by far was marijuana (84.3%), followed by prescription drug (6.1%) and alcohol (5.0%) (Table 6.1.3).

Table 6.1.3. Primary substance use among youth patients, FY2122

PRIMARY SUBSTANCE USE	ADMISSIONS	%
Marijuana	882	84.3
Prescription drug	64	6.1
Alcohol	52	5.0
Methamphetamine	35	3.3
Cocaine	-	-
Heroin	-	-
Other drugs	7	0.7

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.
 N ≤ 5 not reported to protect confidentiality.

Marijuana has consistently been the primary substance of use among youth over the past decade, with its proportion of admissions steadily increasing from 75.1% in FY1213 to 84.3% in FY2122. On the other hand, primary alcohol admissions have declined from 18.6% in FY1213 to 5.0% in FY2122. Primary methamphetamine admissions experienced an initial increase from 4.1% in FY1213 to 10.1% in FY1617, but subsequently decreased to 3.3% in FY2122 (Figure 6.1.2).

Figure 6.1.2. Trends in primary substance use among youth patients

LEVEL OF CARE

The majority of youth were admitted to outpatient programs (79.2%), followed by intensive outpatient programs (12.3%) and residential service programs (7.0%) (Table 6.1.4).

Table 6.1.4. Level of care among youth patients, FY2122

LEVEL OF CARE	ADMISSIONS	%
Residential Service	79	7.0
ASAM 3.5	79	7.0
Outpatient (ASAM 1.0)	894	79.2
Intensive Outpatient (ASAM 2.1)	139	12.3
Recovery Support Service	17	1.5

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

Outpatient programs have consistently been the primary level of care for youth over the past decade. The proportion of youth admissions to intensive outpatient programs initially decreased from FY1213 to FY1718, but experienced an increase to 12.3% in FY2122. In contrast, the proportion of admissions to residential service programs showed an opposite trend, increasing from FY1213 to FY1718 and subsequently decreasing to 7.0% in FY2122 (Figure 6.1.3).

Figure 6.1.3. Trends in level of care among youth patients

DISCHARGE STATUS AND TREATMENT OUTCOMES AT DISCHARGE

Of the discharges among youth with discharge status, 32.1% had positive compliance, with 20.3% completing treatment and 11.8% leaving with satisfactory progress (Table 6.1.5).

Table 6.1.5. Discharge status of youth patients, FY2122

DISCHARGE STATUS	ADMISSIONS	%
Positive compliance	226	32.1
Completed treatment	143	20.3
Left – satisfactory progress	83	11.8
Negative compliance	418	59.4
(Left – unsatisfactory progress)		
Other (Death/incarceration/other)	60	8.5

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

According to the Treatment Effectiveness Assessment (TEA) used to gauge recovery progress per the patients’ perspective at the time of discharge, 25% of youth reported they were better in taking care of personal responsibilities (e.g., paying bills, following through on personal or professional commitments), 29% reported they were better with handling drug and alcohol use (e.g., the frequency and amount of use, money spent on drugs, amount of drug craving, being sick, etc.), 29% reported they were better in physical health (e.g., eating and sleeping properly, exercising, taking care of health or dental problems), 28% reported they were better in mental health (e.g., feeling good about themselves), and 20% reported they were a better community member (e.g., obeying laws, meeting your responsibilities to society, positive impact on others) compared to at admission (Figure 6.1.4).

Figure 6.1.4. Treatment Effectiveness Assessment (TEA) for youth, FY2122

Transitional Age Youth (TAY)

TREATMENT ADMISSIONS AND DISCHARGES

There were 4,123 (12.2%) TAY patients aged 16 to 25, who accounted for 6,379 (11.9%) treatment admissions (Table 6.2.1).

Table 6.2.1. Treatment admissions and discharges among TAY patients, FY2122

	ADMISSIONS		PATIENTS	
	N	% of total admissions	N	% of total patients
Admitted	6,379	11.9	4,123	12.2
Discharged	5,000	13.2	3,315	14.0

The number and proportion of admissions and patients showed a consistent downward trend over the past ten fiscal years. The number and proportion of TAY admissions decreased from 19,905 (27.2%) in FY1213 to 6,379 (11.9%) in FY2122 (Figure 6.2.1).

Figure 6.2.1. Trends in TAY admissions and patients

PATIENT CHARACTERISTICS

The majority of TAY patients were male (60.2%), Latinx (68.4%), age 25 (21.6%), and unemployed (64.3%). Among TAY admissions, 51.0% reported having mental health issues, 29.7% were homeless, and 26.0% were involved with the criminal justice system (Table 6.2.2).

N ≤ 5 not reported to protect confidentiality.

PRIMARY SUBSTANCE USE AT ADMISSION

Methamphetamine (27.9%) was the most common primary substance use among TAY admissions, followed by marijuana (24.6%) and prescription drug (19.9%) (Table 6.2.3).

Table 6.2.3. Primary substance use among TAY patients, FY2122

PRIMARY SUBSTANCE USE	ADMISSIONS	%
Methamphetamine	1,727	27.9
Marijuana	1,521	24.6
Prescription drug	1,233	19.9
Alcohol	1,072	17.3
Heroin	468	7.6
Cocaine	124	2.0
Other drugs	50	0.8

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

Marijuana and methamphetamine have alternated as the primary substance use for TAY patients over the past ten years. Marijuana was the most common primary substance use from FY1213 to FY1415 and again in FY1617 but exhibited an overall decreasing trend. Conversely, the proportion of TAY patients reporting methamphetamine as the primary substance use consistently increased from FY1213 to FY1819 and has remained the most common primary substance use for TAY in the past five fiscal years, albeit with a decreasing trend. Additionally, there has been a substantial increase in the proportion of prescription drug admissions in the last three fiscal years, while the proportion of primary heroin admissions has declined from FY1415 to FY2122 (Figure 6.2.2).

Figure 6.2.2. Trends in primary substance use among TAY patients

LEVEL OF CARE

TAY patients were most commonly treated in outpatient programs (34.1%), followed by residential service programs (30.9%) and intensive outpatient programs (13.9%) (Table 6.2.4).

Table 6.2.4. Level of care among TAY patients, FY2122

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.
 N ≤ 5 not reported to protect confidentiality.

Over the past ten fiscal years, there has been a gradual decrease in the proportion of TAY admissions to outpatient programs. Conversely, the proportion of TAY admissions to residential service programs increased from FY1213 to FY1718 and has since stabilized (Figure 6.2.3).

Figure 6.2.3. Trends in level of care among TAY patients

DISCHARGE STATUS AND TREATMENT OUTCOMES AT DISCHARGE

Of the discharges among TAY with discharge status, 45.8% had positive compliance, with 33.1% completing treatment and 12.7% leaving with satisfactory progress (Table 6.2.5).

Table 6.2.5. Discharge status of TAY patients, FY2122

DISCHARGE STATUS	ADMISSIONS	%
Positive compliance	2,062	45.8
Completed treatment	1,491	33.1
Left – satisfactory progress	571	12.7
Negative compliance	2,084	46.3
(Left – unsatisfactory progress)		
Other (Death/incarceration/other)	354	7.9

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

According to the Treatment Effectiveness Assessment (TEA) used to gauge recovery progress per the patients’ perspective at the time of discharge, 31% of Transitional Age Youth (TAY) reported they were better in taking care of personal responsibilities (e.g., paying bills, following through on personal or professional commitments), 38% reported they were better with handling drug and alcohol use (e.g., the frequency and amount of use, money spent on drugs, amount of drug craving, being sick, etc.), 31% reported they were better in physical health (e.g., eating and sleeping properly, exercising, taking care of health or dental problems), 31% reported they were better in mental health (e.g., feeling good about themselves), and 31% reported they were a better community member (e.g., obeying laws, meeting your responsibilities to society, positive impact on others) compared to at admission (Figure 6.2.4).

Figure 6.2.3. Treatment Effectiveness Assessment (TEA) for Transitional Age Youth (TAY), FY2122

Older Adults

TREATMENT ADMISSIONS AND DISCHARGES

There were 1,857 (3.5%) older adult patients aged 65 and above, who accounted for 1,578 (4.7%) treatment admissions (Table 6.3.1).

Table 6.3.1. Treatment admissions and discharges among older adult patients, FY2122

	ADMISSIONS		PATIENTS	
	N	% of total admissions	N	% of total patients
Admitted	1,857	3.5	1,578	4.7
Discharged	657	1.7	529	2.2

From FY1213 to FY1617, the proportion of admissions and patients in the older adult category remained stable, while the actual number of older adult admissions and patients decreased. However, starting from FY1718, both the proportion and number of older adult admissions and patients have shown fluctuations, with an overall increasing trend (Figure 6.3.1).

Figure 6.3.1. Trends in older adult admissions and patients

PATIENT CHARACTERISTICS

The majority of older adult patients were male (72.7%), White (37.4%), ages 65-69 (64.7%), and unemployed (51.9%). Among older adult admissions, 22.3% reported mental health issues, 21.9% reported a disability, and 17.6% reported physical health issues (Table 6.3.2).

	No	1,720	93.7

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.
N ≤ 5 not reported to protect confidentiality.

PRIMARY SUBSTANCE USE AT ADMISSION

The most commonly reported primary substance use among older adults was heroin (69.6%), followed by prescription drugs (14.9%) and alcohol (8.7%) (Table 6.3.3).

Table 6.3.3. Primary substance use among older adult patients, FY2122

PRIMARY SUBSTANCE USE	ADMISSIONS	%
Heroin	1,274	69.6
Prescription drug	272	14.9
Alcohol	160	8.7
Cocaine	67	3.7
Methamphetamine	39	2.1
Marijuana	9	0.5
Other drugs	10	0.5

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

The proportion of older patients reporting heroin as the primary substance use increased from FY1213-FY1516 then remained high through FY2122. Heroin was the most common primary substance use among older adults for nine of the past ten fiscal years. The proportion of older adults reporting alcohol as the primary substance use significantly decreased from FY1213 to FY1516, and in FY1819, prescription drug surpassed alcohol (Figure 6.3.2).

Figure 6.3.2. Trends in primary substance use among older adult patients

LEVEL OF CARE

The majority (81.5%) of older adult patients were treated in opioid treatment programs. Relatively few were treated in residential service programs (6.0%) and outpatient programs (4.8%) (Table 6.3.4).

Table 6.3.4. Level of care among older adult patients, FY2122

LEVEL OF CARE	ADMISSIONS	%
Withdrawal Management	51	2.8
ASAM WM 3.2	33	1.8
ASAM WM 3.7/4.0	18	1.0
Residential Service	112	6.0

Recovery Support Service	29	1.6

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.
 N ≤ 5 not reported to protect confidentiality.

Since FY1213, older adult admissions to opioid treatment programs increased sharply, surpassing outpatient programs in FY1314 to become and remain the predominant level of care among older adults. On the contrary, older adult admissions to outpatient programs decreased dramatically from FY1213 to FY1516 and remained relatively low in the recent seven fiscal years (Figure 6.3.3).

Figure 6.3.3. Trends in level of care among older adult patients

DISCHARGE STATUS AND TREATMENT OUTCOMES AT DISCHARGE

Of the discharges among older adults with discharge status, 60.4% had positive compliance, with 33.6% completing treatment and 26.8% leaving with satisfactory progress (Table 6.3.5).

Table 6.3.5. Discharge status of older adult patients, FY2122

DISCHARGE STATUS	ADMISSIONS	%
Positive compliance	361	60.4
Completed treatment	201	33.6
Left – satisfactory progress	160	26.8
Negative compliance	213	35.6
(Left – unsatisfactory progress)		
Other (Death/incarceration/other)	24	4.0

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

According to the Treatment Effectiveness Assessment (TEA) used to gauge recovery progress per the patients’ perspective at the time of discharge, 32% of older adults reported they were better in taking care of personal responsibilities (e.g., paying bills, following through on personal or professional commitments), 46% of older adults reported they were better with handling drug and alcohol use (e.g., the frequency and amount of use, money spent on drugs, amount of drug craving, being sick, etc.), 35% reported they were better in physical health (e.g., eating and sleeping properly, exercising, taking care of health or dental problems), 30% reported they were better in mental health (e.g., feeling good about themselves), and 35% reported they were a better community member (e.g., obeying laws, meeting your responsibilities to society, positive impact on others) compared to at admission (Figure 6.3.4).

Figure 6.3.4. Treatment Effectiveness Assessment (TEA) for older adults, FY2122

Patients Involved in the Criminal Justice System³

TREATMENT ADMISSIONS AND DISCHARGES

There were 8,202 (24.3%) patients involved in the criminal system at admission, who accounted for 12,116 (22.7%) treatment admissions (Table 6.4.1).

Table 6.4.1. Treatment admissions and discharges among patients involved in the criminal justice system, FY2122

	ADMISSIONS		PATIENTS	
	N	% of total admissions	N	% of total patients
Admitted	12,116	22.7	8,202	24.3
Discharged	9,692	25.7	6,718	28.3

The proportion of patients who were involved in the criminal justice system remained stable from 15.5% in FY1213 to 16.5% in FY1516 then decreased slightly to 12.8% in FY1718, followed by a steady increase to 24.3% in FY2122 (Figure 6.4.1).

Figure 6.4.1. Trends in the criminal justice system-involved admissions and patients

³ Patients involved in the criminal justice system, including those who were referred by the criminal justice system (e.g., Proposition 36/ Probation or Parole, Post-release Community Supervision (AB 109), Adult Felon Drug Court, Dependency Drug Court, etc.), who reported their eligibility of criminal justice system programs (e.g., Drug Court, AB109, Proposition 36, Parolee Service Network, Proposition 47), or who were matched with AB109 or other probation source lists.

PATIENT CHARACTERISTICS

The majority of patients involved in the criminal justice system were male (75.5%), Latinx (61.3%), ages 26-34 (37.0%), and unemployed (70.3%). More than half (53.6%) reported having mental health issues at admission, and 47.6% were homeless at admission (Table 6.4.2).

	No	9,241	84.3

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

PRIMARY SUBSTANCE USE AT ADMISSION

The most common primary substance use among patients involved in the criminal justice system was methamphetamine (43.3%), followed by alcohol (21.9%) and heroin (14.6%) (Table 6.4.3).

Table 6.4.3. Primary substance use among patients involved in the criminal justice system, FY2122

PRIMARY SUBSTANCE USE	ADMISSIONS	%
Methamphetamine	5,171	43.3
Alcohol	2,616	21.9
Heroin	1,742	14.6
Marijuana	1,098	9.2
Prescription drug	737	6.2
Cocaine	432	3.6
Other drugs	147	1.2

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

Methamphetamine has consistently been the primary substance use among patients involved in the criminal justice system over the past ten fiscal years. Its proportion has shown a continuous increase from FY1213, reaching a peak in FY1819, and subsequently experiencing a slight decrease through FY2122. The proportion of primary cocaine admissions and primary marijuana admissions decreased consistently from FY1213 to FY2122, while primary alcohol admissions and primary heroin admissions increased slightly overall during the same period (Figure 6.4.2).

Figure 6.4.2. Trends in primary substance use among patients involved in the criminal justice system

LEVEL OF CARE

Patients involved in the criminal justice system were most commonly admitted to residential service programs (42.0%), followed by outpatient programs (24.7%) and intensive outpatient programs (15.8%) (Table 6.4.4).

Table 6.4.4. Level of care among patients involved in the criminal justice system, FY2122

LEVEL OF CARE	ADMISSIONS	%
Withdrawal Management	867	7.2
ASAM WM 1	6	0.0
ASAM WM 2	20	0.2
ASAM WM 3.2	587	4.9
ASAM WM 3.7/4.0	254	2.1
Residential Service	5,063	42.0
ASAM 3.1	2,619	21.7
ASAM 3.3	53	0.4
ASAM 3.5	2,391	19.8
Intensive Outpatient (ASAM 2.1)	1,905	15.8
Outpatient (ASAM 1.0)	2,975	24.7
Opioid Treatment Program (ASAM OTP)	886	7.4
Recovery Support Service	350	2.9

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

The proportion of criminal justice-involved admissions to residential service programs exhibited a steady increase, rising from 22.4% in FY1213 to 42.0% in FY2122. In FY2021, residential service programs surpassed outpatient programs as the most common level of care, while the proportion of admissions to outpatient programs showed a consistent decline since FY1415 (Figure 6.4.3).

Figure 6.4.3. Trends in levels of care among patients involved in the criminal justice system

DISCHARGE STATUS AND TREATMENT OUTCOMES AT DISCHARGE

Of the discharges among criminal justice-involved patients with discharge status, 56.1% had positive compliance, with 45.6% completing treatment and 10.4% leaving with satisfactory progress (Table 6.4.5).

Table 6.4.5. Discharge status of criminal justice system-involved patients, FY2122

DISCHARGE STATUS	ADMISSIONS	%
Positive compliance	4,943	56.1
Completed treatment	4,022	45.6
Left – satisfactory progress	921	10.4
Negative compliance	3,179	36.1
(Left – unsatisfactory progress)		
Other (Death/incarceration/other)	694	7.9

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

According to the Treatment Effectiveness Assessment (TEA) used to gauge recovery progress per the patients’ perspective at the time of discharge, 34% of criminal justice system-involved patients reported they were better in taking care of personal responsibilities (e.g., paying bills, following through on personal or professional commitments), 41% reported they were better with handling drug and alcohol use (e.g., the frequency and amount of use, money spent on drugs, amount of drug craving, being sick, etc.), 35% reported they were better in physical health (e.g., eating and sleeping properly, exercising, taking care of health or dental problems), 33% reported they were better in mental health (e.g., feeling good about themselves), and 37% reported they were a better community member (e.g., obeying laws, meeting your responsibilities to society, positive impact on others) compared to at admission (Figure 6.4.4).

Figure 6.4.4. Treatment Effectiveness Assessment for criminal justice system-involved patients, FY2122

Patients who were Experiencing Homelessness at Admission

TREATMENT ADMISSIONS AND DISCHARGES

There were 11,464 (33.9%) patients experiencing homelessness at admission, who accounted for 18,722 (35.0%) treatment admissions (Table 6.5.1).

Table 6.5.1. Treatment admissions and discharges among patients experiencing homelessness, FY2122

	ADMISSIONS		PATIENTS	
	N	% of total admissions	N	% of total patients
Admitted	18,722	35.0	11,464	33.9
Discharged	15,311	40.5	9,806	41.3

The number and proportion of patients experiencing homelessness showed overall increasing trends from 8,900 (14.9%) in FY1213 to 11,464 (33.9%) in FY2122. The number and proportion of admissions among patients experiencing homelessness showed similar trends, increasing from 10,237 (13.8%) in FY1213 to 18,722 (35.0%) in FY2122 (Figure 6.5.1).

PATIENT CHARACTERISTICS

The majority of patients experiencing homelessness at admission were male (67.1%), Latinx (52.4%), ages 26-34 (37.5%), and unemployed (79.2%). Among homeless admissions, 64.9% reported having mental health issues, and 30.2% reported criminal justice involvement (Table 6.5.2).

	No	13,026	69.8

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.
N ≤ 5 not reported to protect confidentiality.

LIVING ARRANGEMENT AT ADMISSION

The most commonly reported living arrangement by patients experiencing homelessness at admission was staying with family or friends (“couch moving”) (36.8%), followed by living outside (33.2%), and sleeping in car/van (11.5%) (Figure 6.5.2)

Figure 6.5.2. Living arrangement among patients experiencing homelessness, FY2122

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

PRIMARY SUBSTANCE USE AT ADMISSION

The most commonly reported primary substance use was methamphetamine (39.7%), followed by alcohol (29.6%) and heroin (11.9%) (Table 6.5.3).

Table 6.5.3. Primary substance use among patients experiencing homelessness, FY2122

PRIMARY SUBSTANCE USE	ADMISSIONS	%
Methamphetamine	7,382	39.7
Alcohol	5,504	29.6
Heroin	2,218	11.9
Prescription drug	1,713	9.2
Marijuana	849	4.6
Cocaine	728	3.9
Other drugs	217	1.2

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

HOMELESSNESS

Among patients experiencing homelessness, methamphetamine emerged as the dominant primary substance use since FY1213, with a consistent upward trend. The proportion of patients reporting heroin as the primary substance use increased from FY1213 to FY1617, but declined thereafter through FY2122. Alcohol surpassed heroin as the second most common primary substance use starting from FY1920 onwards (Figure 6.5.3).

Figure 6.5.3. Trends in primary substance use among patients experiencing homelessness

LEVEL OF CARE

The most common level of care that patients were admitted to was residential service programs (49.8%), followed by outpatient programs (15.1%) and withdrawal management programs (14.6%) (Table 6.5.4).

Table 6.5.4. Level of care among patients experiencing homelessness, FY2122

LEVEL OF CARE	ADMISSIONS	%
Withdrawal Management	2,709	14.6
ASAM WM 1	-	-
ASAM WM 2	40	0.2
ASAM WM 3.2	1,674	9.0

ASAM 3.5	4,945	26.6
Intensive Outpatient (ASAM 2.1)	2,571	13.8
Outpatient (ASAM 1.0)	2,810	15.1
Opioid Treatment Program (ASAM OTP)	961	5.2
Recovery Support Service	272	1.5

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

N ≤ 5 not reported to protect confidentiality.

The proportion of patients experiencing homelessness admitted to residential service programs showed an increasing trend from FY1213 to FY1718, followed by a slight decrease in subsequent years. Conversely, the proportion of admissions to outpatient programs exhibited a gradual decline over the past decade. The proportion of admissions to opioid treatment programs reached its highest point in FY1617 and subsequently decreased through FY2122 (Figure 6.5.4).

Figure 6.5.4. Trends in level of care among patients experiencing homelessness

STABLE HOUSING AT DISCHARGE

According to self-reports, the proportion of patients experiencing homelessness at admission who found stable housing at discharge has shown an increasing trend over the past four fiscal years, reaching the highest percent (31.9%) in FY2122 (Figure 6.5.5).

Figure 6.5.5. Trends in patients experiencing homelessness who found stable housing at discharge

DISCHARGE STATUS AND TREATMENT OUTCOMES AT DISCHARGE

Among patients experiencing homelessness with discharge status, 57.7% had positive compliance, with 47.2% completing treatment, and 10.5% leaving the program with satisfactory progress (Table 6.5.5).

Table 6.5.5. Discharge status of patients experiencing homelessness, FY2122

DISCHARGE STATUS	ADMISSIONS	%
Positive compliance	8,235	57.7
Completed treatment	6,738	47.2
Left – satisfactory progress	1,497	10.5
Negative compliance	5,043	35.3
(Left – unsatisfactory progress)		
Other (Death/incarceration/other)	995	7.0

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

According to the Treatment Effectiveness Assessment (TEA) used to gauge recovery progress per the patients’ perspective at the time of discharge, 35% of patients experiencing homelessness reported they were better in taking care of personal responsibilities (e.g., paying bills, following through on personal or professional commitments), 41% reported they were better with handling drug and alcohol use (e.g., the frequency and amount of use, money spent on drugs, amount of drug craving, being sick, etc.), 36% reported they were better in physical health (e.g., eating and sleeping properly, exercising, taking care of health or dental problems), 35% reported they were better in mental health (e.g., feeling good about themselves), and 35% reported they were a better community member (e.g., obeying laws, meeting your responsibilities to society, positive impact on others) compared to at admission (Figure 6.5.6).

Figure 6.5.6. Treatment Effectiveness Assessment (TEA) for patients experiencing homelessness, FY2122

Patients with Disabilities

TREATMENT ADMISSIONS AND DISCHARGES

Patients who had disabilities (visual, hearing, speech, mobility, mental, developmental, etc.) accounted for 6,088 (18.0%) patients and 7,821 (14.6%) treatment admissions (Table 6.6.1).

Table 6.6.1. Treatment admissions and discharges among patients with disabilities, FY2122

	ADMISSIONS		PATIENTS	
	N	% of total admissions	N	% of total patients
Admitted	7,821	14.6	6,088	18.0
Discharged	5,912	15.7	4,638	19.5

The number of patients with disabilities at the time of admission had decreased from 13,367 in FY1213 to 3,901 in FY2021 with an increase to 6,088 in FY2122. The proportion of patients with disabilities followed a similar trend during the same period (Figure 6.6.1).

Figure 6.6.1. Trends in admissions and patients with disabilities

PATIENT CHARACTERISTICS

The majority of patients with disabilities were male (65.2%), Latinx (45.5%), ages 26-34 (28.9%), and unemployed (71.5%). Among admissions with disabilities, 84.4% reported having mental health issues, and 45.2% were homeless (Table 6.6.2).

	No	6,083	77.9

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.
N ≤ 5 not reported to protect confidentiality.

DISABILITY TYPE

The most common types of disabilities were mental (74.0%), mobility (13.0%), and visual (4.6%) disabilities (Table 6.6.3).

Table 6.6.3. Disability type among patients with disabilities, FY2122

DISABILITY TYPE	ADMISSIONS	%
Mental	5,788	74.0
Mobility	1,016	13.0
Visual	360	4.6
Hearing	158	2.0
Developmental	131	1.7
Speech	62	0.8
Other	563	7.2

Note: Percentages are based on non-missing values, and may not sum to 100% due to co-occurring disabilities.

The proportion of patients reporting mental disability was the most prevalent disability type, exhibiting an overall decreasing trend from 16.2% in FY1213 to 5.0% in FY2021, followed by an increase to 10.8% in FY2122 (Figure 6.6.2).

Figure 6.6.2. Trends in disability type among patients with disabilities

PRIMARY SUBSTANCE USE AT ADMISSION

Alcohol (32.4%) was the most commonly reported primary substance use at admission among patients with disabilities, followed by methamphetamine (26.6%) and heroin (18.3%) (Table 6.6.4).

Table 6.6.4. Primary substance use among patients with disabilities, FY2122

PRIMARY SUBSTANCE USE	ADMISSIONS	%
Alcohol	2,515	32.4
Methamphetamine	2,062	26.6
Heroin	1,421	18.3

Marijuana	413	5.3
Cocaine	296	3.8
Other drugs	63	0.8

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

Heroin had been the most common primary substance use among patients with disabilities at admission from FY1415 to FY1920 and became the third most common primary substance use in FY2122. The proportion reporting alcohol as the most common primary substance use surpassed heroin in FY1213, FY1314, and FY2122 (Figure 6.6.3).

Figure 6.6.3. Trends in primary substance use among patients with disabilities

LEVEL OF CARE

Patients who had disabilities were most commonly admitted to residential service programs (33.5%), followed by withdrawal management programs (19.0%) and outpatient programs (19.0%) (Table 6.6.5).

Table 6.6.5. Level of care among patients with disabilities, FY2122

LEVEL OF CARE	ADMISSIONS	%
Withdrawal Management	1,463	19.0

Recovery Support Service	86	1.1

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

The proportion admitted to residential service programs among patients with disabilities increased substantially from FY1617 to FY1718 and remained high thereafter, while that of outpatient programs showed a decreasing trend over the last ten fiscal years with a slight increase in FY2021 and FY2122 (Figure 6.6.4).

Figure 6.6.4. Trends in level of care among patients with disabilities

DISCHARGE STATUS AND TREATMENT OUTCOMES AT DISCHARGE

Among patients with disabilities with discharge status, 58.0% had positive compliance, with 46.3% completing treatment, and 11.7% leaving the program with satisfactory progress (Table 6.6.6).

Table 6.6.6. Discharge status of patients with disabilities, FY2122

DISCHARGE STATUS	ADMISSIONS	%
Positive compliance	3,115	58.0
Completed treatment	2,489	46.3
Left – satisfactory progress	626	11.7
Negative compliance	1,986	37.0
(Left – unsatisfactory progress)		
Other (Death/incarceration/other)	272	5.1

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

According to the Treatment Effectiveness Assessment (TEA) used to gauge recovery progress per the patients’ perspective at the time of discharge, 30% of patients with disabilities reported they were better in taking care of personal responsibilities (e.g., paying bills, following through on personal or professional commitments), 44% reported they were better with handling drug and alcohol use (e.g., the frequency and amount of use, money spent on drugs, amount of drug craving, being sick, etc.), 35% reported they were better in physical health (e.g., eating and sleeping properly, exercising, taking care of health or dental problems), 32% reported they were better in mental health (e.g., feeling good about themselves), and 30% reported they were a better community member (e.g., obeying laws, meeting your responsibilities to society, positive impact on others) compared to at admission (Figure 6.6.5).

Figure 6.6.5. Treatment Effectiveness Assessment (TEA) for patients with disabilities, FY2122

Lesbian, Gay, Bisexual, and Transgender (LGBTQ) Patients⁴

TREATMENT ADMISSIONS AND DISCHARGES

Patients reporting LGBTQ status (i.e., homosexual/gay/lesbian, bisexual, transgender, or unsure/questioning) accounted for 2,138 (6.3%) patients and 3,838 (7.2%) treatment admissions (Table 6.7.1).

Table 6.7.1. Treatment admissions and discharges among LGBTQ patients, FY2122

	ADMISSIONS		PATIENTS	
	N	% of total admissions	N	% of total patients
Admitted	3,838	7.2	2,138	6.3
Discharged	3,024	8.0	1,725	7.3

The proportion of LGBTQ patients reached its peak in FY1718 and has been steady the last four fiscal years (Figure 6.7.1).

Note: Transgender people were included in the LGBTQ group in data collected from FY1718 to FY2122 but not in the other fiscal years.

PATIENT CHARACTERISTICS

Of the total of 2,138 LGBTQ patients, 91.7% identified as gay, lesbian, or bisexual and 7.7% identified as unsure/questioning. Among the 4.9% (105) patients identified as transgender, the majority (70.2%) did not report their specific sexual orientation and identified solely as transgender. Additionally, 12.5% of transgender identified as heterosexual, and 14.4% identified as lesbian, gay, or bisexual.

⁴ Patients identified as “Transgender male” or Transgender female” within the “Gender Identity” or “Gay, lesbian, or bisexual” or “Unsure/questioning” within the “Sexual Orientation”.

LGBTQ patients were most commonly Latinx (49.2%) and White (28.0%), ages 26-34 (39.8%), and unemployed (68.8%). 72.1% of LGBTQ admissions reported having mental health issues, and 45.1% were homeless at admission (Table 6.7.2).

*Reported by patients who self identified as transgender per the "Gender Identity" question

PRIMARY SUBSTANCE USE AT ADMISSION

The most commonly reported primary substance use among LGBTQ patients was methamphetamine (45.5%), followed by alcohol (24.6%) and prescription drug (10.1%) (Table 6.7.3).

Table 6.7.3. Primary substance use among LGBTQ patients, FY2122

PRIMARY SUBSTANCE USE	ADMISSIONS	%
Methamphetamine	1,702	45.5
Alcohol	920	24.6
Prescription drug	376	10.1
Heroin	343	9.2
Marijuana	285	7.6
Cocaine	90	2.4
Other drugs	25	0.7

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

LGBTQ patients reported methamphetamine as the most common primary substance use over the last ten fiscal years. The proportion of LGBTQ patients reporting heroin as the primary substance use decreased since FY1516 and the proportion reporting alcohol as the primary substance use increased in contrast (Figure 6.7.2).

Figure 6.7.2. Trends in primary substance use among LGBTQ patients

LEVEL OF CARE

LGBTQ patients were most commonly admitted to residential service programs (39.2%), followed by outpatient programs (23.0%) and intensive outpatient programs (18.2%) (Table 6.7.4).

Table 6.7.4. Level of care among LGBTQ patients, FY2122

LEVEL OF CARE	ADMISSIONS	%
Withdrawal Management	361	9.5
ASAM WM 1	-	-

Recovery Support Service	105	2.8

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.
N ≤ 5 not reported to protect confidentiality.

The proportion of LGBTQ patients admitted to outpatient programs showed a decreasing trend overall during the past ten fiscal years. The proportion admitted to residential service programs sharply increased from FY1415 to FY1718 then stabilized through FY2122, while the proportion admitted to opioid treatment programs has decreased steadily since FY1415 (Figure 6.7.3).

Figure 6.7.3. Trends in level of care among LGBTQ patients

DISCHARGE STATUS AND TREATMENT OUTCOMES AT DISCHARGE

Of the discharges among LGBTQ patients with discharge status, 54.0% had positive compliance, with 41.9% completing treatment and 12.1% leaving with satisfactory progress (Table 6.7.5).

Table 6.7.5. Discharge status of LGBTQ patients, FY2122

DISCHARGE STATUS	ADMISSIONS	%
Positive compliance	1,511	54.0
Completed treatment	1,173	41.9
Left – satisfactory progress	338	12.1
Negative compliance	1,074	38.4
(Left – unsatisfactory progress)		
Other (Death/incarceration/other)	213	7.6

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

According to the Treatment Effectiveness Assessment (TEA) used to gauge recovery progress per the patients’ perspective at the time of discharge, 34% of LGBTQ reported they were better in taking care of personal responsibilities (e.g., paying bills, following through on personal or professional commitments), 40% reported they were better with handling drug and alcohol use (e.g., the frequency and amount of use, money spent on drugs, amount of drug craving, being sick, etc.), 36% reported they were better in physical health (e.g., eating and sleeping properly, exercising, taking care of health or dental problems), 35% reported they were better in mental health (e.g., feeling good about themselves), and 33% reported they were a better community member (e.g., obeying laws, meeting your responsibilities to society, positive impact on others) compared to at admission (Figure 6.7.4).

Figure 6.7.4. Treatment Effectiveness Assessment (TEA) for LGBTQ patients, FY2122

Women of Reproductive Age

TREATMENT ADMISSIONS AND DISCHARGES

Patients who were women of reproductive age (15-49) accounted for 9,250 (27.4%) patients and 15,465 (28.9%) treatment admissions (Table 6.8.1).

Table 6.8.1. Treatment admissions and discharges among women of reproductive age, FY2122

REPRODUCTIVE WOMEN

According to the Treatment Effectiveness Assessment (TEA) used to gauge recovery progress per the patients' perspective at the time of discharge, 33% of women of reproductive age reported they were better in taking care of personal responsibilities (e.g., paying bills, following through on personal or professional commitments), 39% reported they were better with handling drug and alcohol use (e.g., the frequency and amount of use, money spent on drugs, amount of drug craving, being sick, etc.), 34% reported they were better in physical health (e.g., eating and sleeping properly, exercising, taking care of health or dental problems), 34% reported they were better in mental health (e.g., feeling good about themselves), and 33% reported they were a better community member (e.g., obeying laws, meeting your responsibilities to society, positive impact on others) compared to at admission (Figure 6.8.1).

Figure 6.8.1. Treatment Effectiveness Assessment (TEA) for women of reproductive age, FY2122

Veterans

TREATMENT ADMISSIONS AND DISCHARGES

Patients who were veterans accounted for 724 (2.1%) patients and 859 (1.6%) treatment admissions (Table 6.9.1).

Table 6.9.1. Treatment admissions and discharges among veteran patients, FY2122

	ADMISSIONS		PATIENTS	
	N	% of total admissions	N	% of total patients
Admitted	859	1.6	724	2.1
Discharged	587	1.6	493	2.1

The proportion of veteran admissions and patients increased from FY1213 to FY1617, decreased through FY2021, and increased slightly in FY2122 (Figure 6.9.1).

Figure 6.9.1. Trends in admissions and patients among patients who were veterans

PATIENT CHARACTERISTICS

The majority of patients who were veterans were male (79.5%), Latinx (45.1%), ages 35-44 (24.2%), and unemployed (65.0%). Among veteran admissions, 56.1% had mental health issues, 38.4% were homeless, and 24.5% had a disability (Table 6.9.2).

Table 6.9.2. Characteristics of patients who were veterans, FY2122

	No	685	80.1

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.
N ≤ 5 not reported to protect confidentiality.

PRIMARY SUBSTANCE USE AT ADMISSION

The most common primary substance use reported at admission among veterans was heroin (28.4%), followed by alcohol (26.7%) and methamphetamine (24.0%) (Table 6.9.3).

Table 6.9.3. Primary substance use among patients who were veterans, FY2122

PRIMARY SUBSTANCE USE	ADMISSIONS	%
Heroin	243	28.4
Alcohol	229	26.7
Methamphetamine	206	24.0
Prescription drug	97	11.3
Cocaine	50	5.8
Marijuana	28	3.3
Other drugs	-	-

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.
 N ≤ 5 not reported to protect confidentiality.

The proportion of patients who were veterans that reported heroin as the primary substance use increased from FY1213 to FY1617 then decreased through FY2122, though it remained the most common primary substance use for the past ten fiscal years. The proportion reporting a primary methamphetamine use increased from FY1617 to FY1819 and remained relatively stable through FY2122 (Figure 6.9.2).

Figure 6.9.2. Trends in primary substance use among patients who were veterans

LEVEL OF CARE

Veteran patients were most commonly treated in opioid treatment programs (32.1%), followed by residential service programs (30.0%) and outpatient programs (17.2%) (Table 6.9.4).

Table 6.9.4. Level of care among patients who were veterans, FY2122

LEVEL OF CARE	ADMISSIONS	%
Withdrawal Management	85	9.9
ASAM WM 3.2	47	5.5
ASAM WM 3.7/4.0	38	4.4
Residential Service	257	30.0
ASAM 3.1	137	16.0
ASAM 3.5	120	14.0
Intensive Outpatient (ASAM 2.1)	92	10.7
Outpatient (ASAM 1.0)	147	17.2

Recovery Support Service	-	-

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.
N ≤ 5 not reported to protect confidentiality.

The proportion of patients who were veterans and were admitted to opioid treatment programs increased continuously from FY1213 to FY1617, then decreased through FY2122, coupled with a roughly opposite movement in the proportion admitted to residential service program. The proportion admitted to outpatient programs showed a decreasing trend overall over the last ten fiscal years (Figure 6.9.3).

Figure 6.9.3. Trends in level of care among patients who were veterans

DISCHARGE STATUS AND TREATMENT OUTCOMES AT DISCHARGE

Of the discharges among patients who were veterans and had discharge status, 52.7% had positive compliance, with 37.9% completing treatment and 14.8% leaving with satisfactory progress (Table 6.9.5).

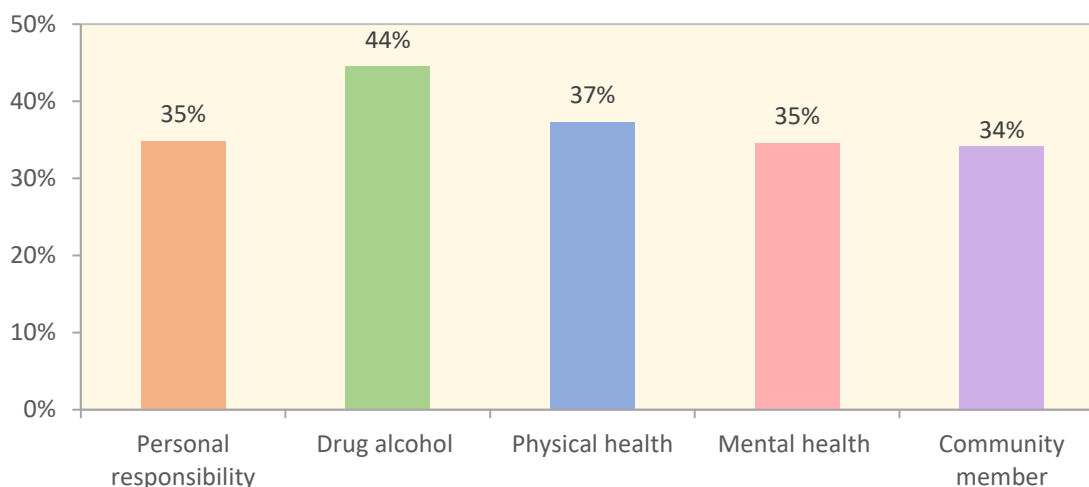

Table 6.9.5. Discharge status of patients who were veterans, FY2122

DISCHARGE STATUS	ADMISSIONS	%
Positive compliance	296	52.7
Completed treatment	213	37.9
Left – satisfactory progress	83	14.8
Negative compliance	223	39.7
(Left – unsatisfactory progress)		
Other (Death/incarceration/other)	43	7.7

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

According to the Treatment Effectiveness Assessment (TEA) used to gauge recovery progress per the patients’ perspective at the time of discharge, 35% of veterans reported they were better in taking care of personal responsibilities (e.g., paying bills, following through on personal or professional commitments), 44% reported they were better with handling drug and alcohol use (e.g., the frequency and amount of use, money spent on drugs, amount of drug craving, being sick, etc.), 37% reported they were better in physical health (e.g., eating and sleeping properly, exercising, taking care of health or dental problems), 35% reported they were better in mental health (e.g., feeling good about themselves), and 34% reported they were a better community member (e.g., obeying laws, meeting your responsibilities to society, positive impact on others) compared to at admission (Figure 6.9.4).

Figure 6.9.4. Treatment Effectiveness Assessment (TEA) for Veterans, FY2122

Patients Enrolled in My Health LA (MHLA) Program

TREATMENT ADMISSIONS AND DISCHARGES

There were 712 (2.1%) patients enrolled in the MHLA program (MHLA patients) at admission, who accounted for 1,093 (2.0%) treatment admissions (Table 6.10.1).

Table 6.10.6. Treatment admissions among MHLA patients, FY2122

	ADMISSIONS		PATIENTS	
	N	% of total admissions	N	% of total patients
Admitted	1,093	2.0	712	2.1
Discharged	847	2.2	552	2.3

The number of MHLA patients experienced a significant increase of 1,071% from 59 in FY1617 to 691 in FY1920. The upward trend continued, although at a more moderate rate, thereafter (Figure 6.10.1).

Figure 6.10.1. Trend in MHLA patients, FY1617 - FY2122

The monthly number of MHLA patients among new admissions increased from 64 in July 2019 to 82 in June 2022 (Figure 6.10.2).

Figure 6.10.2. Trend in MHLA patient among new admissions, monthly, FY1920-FY2122

The quarterly number of MHLA patients among new admissions increased 1,721% from 14 in the first quarter of FY1617 to 255 in the second quarter of FY2122 and dropped about 45% in the subsequent quarters (Figure 6.10.3).

Figure 6.10.3. Trend in MHLA patients among new admissions, quarterly, FY1617– FY2122

The number of MHLA patients who were referred by MHLA clinics per referral source data increased from 8 in FY1617 to 40 in FY1920, then decreased to 33 in FY2122 (Figure 6.10.4).

Figure 6.10.4. Trend in MHLA clinic referrals among MHLA patients, FY1617- FY2122

PATIENT CHARACTERISTICS

The majority of the MHLA patients were male (68.0%), Latinx (96.4%), ages 26 to 34 (41.4%), and unemployed (56.3%) (Table 6.10.2).

	High school completed	33.8
	Some college or beyond	6.9
EMPLOYMENT	Employed	34.3
	Unemployed (seeking)	39.1
	Unemployed (not seeking)	17.2
	Not in labor force	9.4

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.
N ≤ 5 not reported to protect confidentiality.

PRIMARY SUBSTANCE USE AT ADMISSION

The most common primary substance use reported at admission among MHLA patients was methamphetamine (53.4%), followed by alcohol (38.6%) and marijuana (4.4%) (Table 6.10.3).

Table 6.10.3. Primary substance use among MHLA patients, FY2122

PRIMARY SUBSTANCE USE	%
Methamphetamine	53.4
Alcohol	38.6
Marijuana	4.4
Heroin	1.6
Cocaine	1.4
Prescription drug	-
Other drugs	-

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.
N ≤ 5 not reported to protect confidentiality.

LEVEL OF CARE

MHLA patients were most commonly treated in outpatient programs (36.9%), followed by residential service programs (24.6%) and intensive outpatient programs (20.4%) (Table 6.10.4).

Table 6.10.4. Level of care among MHLA patients, FY2122

LEVEL OF CARE	%
Withdrawal Management	5.6
ASAM WM 3.2	3.1
ASAM WM 3.7/4.0	2.6
Residential Service	24.6
ASAM 3.1	16.0
ASAM 3.5	8.6
Intensive Outpatient (ASAM 2.1)	20.4
Outpatient (ASAM1.0)	36.9
Opioid Treatment Program (ASAM OTP)	0.4
Recovery Support Service	12.2

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.
N ≤ 5 not reported to protect confidentiality.

DISCHARGE STATUS AND TREATMENT OUTCOMES AT DISCHARGE

Of the discharges among MHLA patients who had discharge status, 61.1% had positive compliance, with 51.2% completing treatment and 9.9% leaving with satisfactory progress (Table 6.10.5).

Table 6.10.5. Discharge status of MHLA patients, FY2122

DISCHARGE STATUS	%
Positive compliance	61.1
Completed treatment	51.2
Left – satisfactory progress	9.9
Negative compliance	30.2
(Left – unsatisfactory progress)	
Other (Death/incarceration/other)	8.8

Note: Percentages are based on non-missing values, and may not sum to 100% due to rounding.

According to the Treatment Effectiveness Assessment (TEA) used to gauge recovery progress per the patients’ perspective at the time of discharge, 42% of MHLA patients reported they were better in taking care of personal responsibilities (e.g., paying bills, following through on personal or professional commitments), 45% reported they were better with handling drug and alcohol use (e.g., the frequency and amount of use, money spent on drugs, amount of drug craving, being sick, etc.), 40% reported they were better in physical health (e.g., eating and sleeping properly, exercising, taking care of health or dental problems), 39% reported they were better in mental health (e.g., feeling good about themselves), and 43% reported they were a better community member (e.g., obeying laws, meeting your responsibilities to society, positive impact on others) compared to at admission (Figure 6.10.5).
