

Animal Bites and Rabies Exposures – A Checklist for Private Practice Physicians

NOTE: If the patient is insured, rabies post-exposure prophylaxis (rabies PEP) is the responsibility of the doctor caring for the patient. The Los Angeles County Department of Public Health (DPH) provides rabies post-exposure treatment only for uninsured patients. Patients needing assistance with paying for rabies PEP may also seek help through two national programs at: www.cdc.gov/rabies/medical_care/programs.html

- COLLECT ANIMAL INFORMATION from patient
 - Biting animal's behavior, animal species and general description of animal.
 - Date, location where bite occurred.
 - Where is animal now? Ask bite victim to clarify. Animal will need to be tested or quarantined.
 - Rodent, squirrel, and rabbit bites are not reportable
- REPORT BITE
 - Report to Veterinary Public Health and Rabies Control:
 - Tel: (877) 747-2243 or (213) 989-7060, Fax (213) 481-2375
 - Online Reporting: www.publichealth.lacounty.gov/vet/biteintro.htm
 - All animal bites are legally reportable except rodent, squirrel, and rabbit bites. Bites must be reported even if the animal appeared healthy.
- EVALUATE NEED for Rabies Post-Exposure Prophylaxis (PEP)
 - Should Rabies PEP be given?
 - See national guidelines at: www.cdc.gov/mmwr/PDF/rr/rr57e507.pdf
 - See update about dropping fifth vaccine dose from standard protocol at: www.cdc.gov/mmwr/preview/mmwrhtml/rr5902a1.htm
 - Cat/dog bites that happened within LA County might not require PEP.
 - Ask our veterinarians about rabies data in local animals: (213) 989-7060 or see www.publichealth.lacounty.gov/vet
 - If needed, physician can call “Doctor On Duty” at Public Health – Acute Communicable Disease Control (ACDC) for consultation: **(213) 240-7941** (if case is based in Los Angeles County).
- IF NEEDED, ADMINISTER Rabies PEP
 - Medical “urgency” not emergency
 - Generally covered by insurance.
 - County provides to patient only if UNINSURED
 - First day you begin rabies PEP is called Day 0.
 - Rabies vaccine
 - Give intramuscularly on days 0, 3, 7, 14. Deltoid muscle is common choice. Do not give in the gluteal muscles.
 - Note: As of fall 2009 – 5th vaccine dose at day 28 dropped from standard ACIP recommendations. Vaccine labels still describe 5-dose protocol.
 - Immunosuppressed patients still need to receive 5th rabies vaccines at day 28.
 - Available in 1 ml individual doses.
 - Human anti-rabies immunoglobulin (HRIG).
 - Give 1 dose only - 20 iu/kg
 - Available in 2 or 10 ml vials, 150 iu/ml
 - Given on Day 0 only - Administer as much as possible in and around bite wound, with remainder given intramuscularly at site distant from location where rabies vaccine was given.
 - If HRIG is delayed, must give within 7 days of first rabies vaccine dose.
 - Emergency Departments often have rabies biologicals on hand.
 - ANY doctor can order and administer rabies biologicals. May receive shipment quickly.

Ordering Rabies Vaccine

<p>GlaxoSmithKline (RabAvert® – PCECV) 1-800-244-7668 www.GSKdirect.com</p>	<p>Sanofi-Pasteur (Imovax® -HDCV) 1-800-822-2463 www.vaccineshoppe.com</p>
<p><u>For Post-Exposure Prophylaxis:</u> Available for ordering without restrictions. Often able to receive order rapidly.</p> <p><u>Pre-exposure Prophylaxis:</u> Available for ordering without restrictions.</p>	<p><u>For Post-Exposure Prophylaxis:</u> : Available for ordering without restrictions. Often able to receive order rapidly.</p> <p><u>Pre-exposure Prophylaxis:</u> Available for ordering without restrictions.</p>
<p><u>Ordering:</u> <u>From GSK:</u> Create an account on website www.GSKdirect.com. Obtain customer number. Place order. Vaccine can be ordered and received overnight. No minimum order. No charge to set up or maintain account in advance.
